

HFM to FCCS Metadata Conversion

EPMware streamlines the HFM to Oracle FCCS metadata conversion process by importing and merging your current HFM hierarchies with the FCCS predefined hierarchies.

EPMware is a full featured master data management and data governance software designed for the business user to regain control of their metadata. Design and enforce data governance practices using highly configurable workflows tied in to a robust approval process. With built-in Oracle Hyperion intelligence and out-of-the-box integration, sharing of hierarchies across Oracle's Cloud and on-premises financial applications is a seamless process, creating dimensional consistency across all source and target systems.

Conversion Process

- EPMware connects directly to your FCCS application in the Cloud via the Oracle REST API and imports the FCCS predefined system hierarchies into EPMware.
- The HFM hierarchies and applicable properties are mapped to FCCS Dimensions and properties and imported into EPMware and displayed in separate HFM Legacy hierarchies by dimension.
- Build the FCCS hierarchies by moving the HFM hierarchy members from the HFM legacy hierarchy.
- The member moves are captured as transactions and logged to provide an audit trail of how the FCCS hierarchies were created.
- FCCS member properties are edited in EPMware as needed.
- Metadata is immediately deployed or scheduled for deployment to FCCS once approved via the EPMware workflow.

Free Trial

EPMware offers a free trial of our software on the cloud, so the conversion feature can be used free of charge for just trying EPMware. No catch, no software installations, and no obligations. If you no longer wish to use EPMware after the trial, we can simply disconnect it. Your FCCS application will not be affected in any way and all your metadata stays intact.

BENEFITS

- Saves time compared to other metadata conversion methods
- Free! The conversion tool is free to use with a trial of EPMware Cloud
- Establish a data governance and metadata management process for FCCS hierarchies
- Share hierarchies with other on-premise or Cloud applications, including Hyperion and other Oracle EPM Cloud applications
- Audit trail of HFM to FCCS metadata conversion
- A historical copy of your HFM application metadata can be stored in EPMware as a separate application

FEATURES

- Cloud or on-premise
- Direct integration with FCCS
- Import FCCS predefined hierarchies
- Robust workflow and approval process for change management
- Scheduled automated metadata deployments to FCCS application
- Seamless metadata integration
- Full featured dashboard to manage requests
