Release 24.04.82 Notes

Test Release Date: April 12, 2024, **Production Release Date:** April 26, 2024

Agent Update

None

OneStream DLL Update

None

Introduction

EPMware Release 24.04.82

This is a minor release containing new features and enhancements to existing features, and API additions. The features of this release were developed to enhance the design capabilities, performance, and improve ease of use of applications. System administrators and users will benefit from the enhancements across their application.

Change Types	# of items
New Features	0
Improvements	11
Fixes	7
Total	18

Improvements

Allow users to Bulk Upload Hierarchy Action Configurations

[EW-1892] – This feature will allow users to use Bulk Upload for Hierarchy Action configuration.

Exclude Inactivated Groups in the Security Provisioning Screen

[EW-1946] – Security Groups that are inactive will now be excluded on the Security Provisioning Screen.

Add columns and filters on the Users Page so Tokens can be viewed on the grid.

[EW-1971] – Currently, we have a menu named “Generate Token” for all users. But existing tokens were not viewable on the grid.

Change the Warning Message so when a member is being deleted it will include the number of shared instances being deleted as well

[EW-1987] – Change the Warning Message so when a member is being deleted it will include the number of shared instances being deleted as well.

Create a Logic Builder API to provide the # of Shared instances of a Given Member

[EW-1988] – Create a Logic Builder API to provide the # of Shared instances of a Given Member.

Show a Warning message if user is changing Stored Property to a Derived Property

[EW-1990] – Show a Warning message if user is changing Stored Property to a Derived Property

Purge old exports which are due as part of Export Execution

[EW-1993] – Purge old exports which are due as part of Export Execution.

Add a new column on the Export Detail tab called "Export Seq Num"

[EW-1996] – Add a new column on the Export Detail tab called "Export Seq Num". The will allow users to order the Exports display.

Add a Logic Builder API to Get Request Lines Count for a given application and dimension

[EW-1997] – Add a Logic Builder API to Get Request Lines Count for a given application and dimension.

Bulk Upload processing stop on first line error

[EW-2000] – For example, if the top level member fails validations then all of its descendants are not created. This is captured in the Pre Validation errors. However, if users continue partial bulk upload then such lines were being ignored. Now we will stop processing such lines if they have hard error meaning not related to dependencies.

Update shared to Primary nodes report to process Extended Dimensions for OneStream applications

[EW-2004] – If a user selects one of the Extended dimensions of OneStream and selects “Top Member” and it is extended in the dimension then two issues occurred that were fixed.

1. Top Member Name parameter should show all members not just members from the extended dimension only. In other words it should show the same set of members that are shown in explorer.
2. Process members as if it is a normal dimension

Fixes

Creating Security Groups from a Template does not automatically assign Metadata Module to those Groups on the Provisioning Screen

[EW-1962] – The Metadata Module will now be automatically assigned when Security Groups are added using a Template.

Bulk Upload Template throws errors if the dimension has a very large # of properties

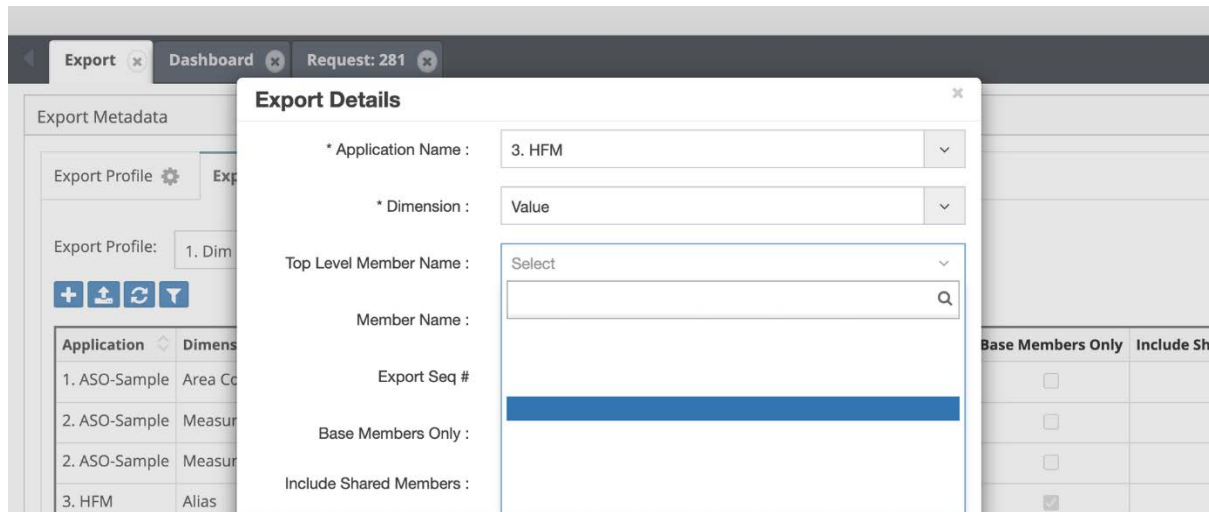

[EW-1982] – If a dimension has a large # of properties (sum of property labels > 2000 characters) then the template generation fails.

Export throws Null pointer error when export file is empty

[EW-1986] – If an Export didn't have any records, then a "Null Pointer" error was displayed.

Export Detail Form showing blank values in "Top Member" drop down list

[EW-1999] – Export Detail Form (See Below) was showing blank values in "Top Member" drop down list

Multi Member Select display type property validation throws an error even if values are valid if “Association Top Member” is assigned.

[EW-2002] – Multi Member Select display type property validation threw an error even if values are valid, if “Association Top Member” was assigned.

Reorder Member action does not work on Generic applications if the Member Description Property is not set

[EW-2003] – Reorder Member action was not working on Generic applications if the Member Description Property was not set.

Property Delta Popup does not show values if a member is edited in a request multiple times

[EW-1982] – Property change Popup (See below) does not show values if a member is edited in a request multiple times.

Property Changes - Cash Flow

Property	Prior Value	New Value
Description		Feb, Jan
