Release 24.08.86 Notes

Test Release Date: Aug 10th, 2024, Production Release Date: Aug 23, 2024

Agent Update

None

Introduction

EPMware Release 24.08.86

This is a minor release containing new features and enhancements to existing features, and API additions. The features of this release were developed to enhance the design capabilities, performance, and improve ease of use of applications. System administrators and users will benefit from the enhancements across their application.

Change Types	# of items
--------------	------------

New Features	1
Improvements	5
Fixes	1
Total	7

New Features

Add feature in Export module to optionally expand Shared nodes

[EW-2073] - Add feature in Export module to optionally expand Shared nodes. Earlier If a shared node was a parent node was not expanded to show its descendants but with this feature if enabled it will show them This is useful in cases where users want only those members from a branch (for example Alternate branch) only where it has shared instances. If this option is not enabled then shared instances even though having child members will be shown as a leaf member and none of its descendants will be shown. But with this option it will show descendants of that shared parent member

The screenshot displays the EPMware Export module interface. The main window has tabs for Dashboard, Property, Categories, and Export. The Export tab is active, showing the 'Export Metadata' section. This section includes an 'Export Profile' dropdown set to 'BOOK_ASO', a table of export profiles, and a list of entries. The table has columns for Application, Dimension, and Top Level Member. The list shows one entry: '1. ASO-Sample' under the 'Products' dimension. The 'Export Details' tab is selected, showing a dialog box titled 'Edit Export Details for BOOK_ASO'. This dialog box contains several fields and checkboxes: '* Application Name' (1. ASO-Sample), '* Dimension' (Products), 'Top Level Member Name' (Select), 'Member Name' (Use * as Wildcard), 'Export Seq #' (empty), 'Base Members Only' (unchecked), 'Include Shared Members' (checked), 'Expand Shared Nodes' (unchecked, highlighted with a red box), 'Show Properties for Shared Members' (unchecked), and 'Enabled' (checked). At the bottom right of the dialog are 'Save' and 'Close' buttons.

Application	Dimension	Top Level Member
1. ASO-Sample	Products	

Showing 1 to 1 of 1 entries

Improvements

Add a new field to assign Workflows in the Property Categories screen.

[EW-2042] - Prior to this release, users had to first enable Workflow Filtering in the Property Category screen, close the popup and then right click category to open the Workflow filtering popup to assign workflows. This two step process is now simplified by allowing users to apply workflows in the main property categories popup itself.

The screenshot shows the 'Edit Category' dialog box in the 'Property Categories' screen. The dialog has the following fields:

- * Dimension: All
- * Name: Default
- Enabled: ☒
- Description:
- Sort Order: 1
- Security Class: Select
- Workflow Filtering: ☒ (highlighted with a red box)
- * Workflow: Deploy Only (highlighted with a red box)
- Node Level Filtering: ☐

* Required

Buttons: Save, Cancel

Add new Logic Builder APIs for String Package to determine prefix/suffix in an alphanumeric string.

[EW-2074] - Add new Logic Builder APIs for String Package to determine prefix/suffix in an alphanumeric string.

Package EW_STRING

```
-- From a given string split numerical value and provide prefix
and suffix values
-- For example,
-- AB1000 will return 1000, AB as prefix nothing for suffix
-- 1000CD will return 1000, nothing for prefix CD for suffix
-- 190000 will return 190000, nothing for both prefix and suffix
-- AB1000CD will return 1000, AB for prefix and CD for suffix
PROCEDURE split_numeric(p_str IN VARCHAR2
, x_number OUT NUMBER
, x_prefix OUT VARCHAR2
, x_suffix OUT VARCHAR2
)
```

Add new Logic Builder API to Copy member Properties from Source member to the Target Member.

[EW-2075] - Add a new Logic Builder API to copy member properties from source member to the target member.

This API is very useful when a solution is required to copy member properties from a source application to the target application without dimension mapping logic.

Two APIs, one with IDs and the second with names.

Package EW_HIERARCHY

- Return Y if no errors else return N with error message

```
FUNCTION copy_member_properties_id
(p_source_member_id IN NUMBER
, p_source_app_dim_id IN NUMBER
, p_target_member_id IN NUMBER
, p_target_app_dim_id IN NUMBER
, p_target_hierarchy_id IN NUMBER
, x_msg IN OUT VARCHAR2
```

```

)
RETURN VARCHAR2

-- Return Y if no errors else return N with error message
FUNCTION copy_member_properties_name
(p_source_member_name IN VARCHAR2
,p_source_app_name IN VARCHAR2
,p_source_dim_name IN VARCHAR2
--
,p_target_member_name IN VARCHAR2
,p_target_app_name IN VARCHAR2
,p_target_dim_name IN VARCHAR2
,x_msg IN OUT VARCHAR2
)
RETURN VARCHAR2;

```

Create a new Admin Report to clear all debug messages.

[EW-2076] – A new Report in the Admin group was added called “Delete All Debug Messages”. This is useful when the debug table grows too big and needs to be truncated.

Add support for system Properties in the Export where Export Tables (Fast Export) are not used

[EW-2063] - Add support for System Properties in the Export where Export Tables are not used (Fast Export).

Fixes

User Defined Fields with Workflow filtering enabled throws Validation errors even if that UDF is not enabled for workflows

[EW-2067] - If users have enabled workflow filtering for UDFs then requests which do not use those workflows should not be validating UDFs.
