Release 23.08.74 Notes

Test Release Date: August 4, 2023, **Production Release Date:** August 18, 2023

Agent Updates

None

Introduction

EPMware Release 23.08.74

This is a minor release containing new features and enhancements to existing features, and API additions. The features of this release were developed to enhance the design capabilities, performance, and improve ease of use of applications. System administrators and users will benefit from the enhancements across their application.

Change Types	# of items
New Features	2
Improvements	6
Fixes	2
Total	10

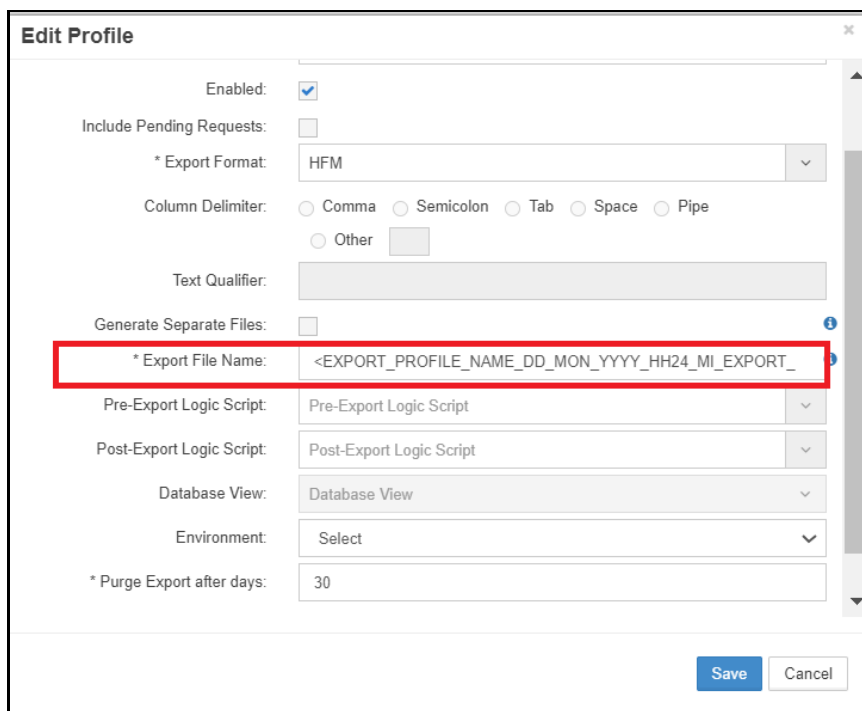

New Features

Allow partial processing for Bulk Upload

[EW-1631] - Allow partial processing in the Bulk Upload. Prior to this release, if there was an error during the Bulk Upload Validation stage the entire file was rejected. With this release, the option will be given to continue partial processing of the file. The lines having errors will be ignored.

Add an option in the Export Profile to allow users to specify export file name including extension

[EW-1700] - Add an option in the Export Profile to allow users to specify an export file name including an extension. Previously, Export Files were generated by the system and users could not assign fixed file names if it was required for integration purposes. With this release users can now assign custom file names.

The screenshot shows the 'Edit Profile' dialog box with the following fields and options:

- Enabled: ☒
- Include Pending Requests: ☐
- * Export Format: HFM (dropdown)
- Column Delimiter: ☐ Comma ☐ Semicolon ☐ Tab ☐ Space ☐ Pipe ☐ Other (text input)
- Text Qualifier: (text input)
- Generate Separate Files: ☐
- * Export File Name: <EXPORT_PROFILE_NAME_DD_MON_YYYY_HH24_MI_EXPORT_ (highlighted with a red box)
- Pre-Export Logic Script: Pre-Export Logic Script (dropdown)
- Post-Export Logic Script: Post-Export Logic Script (dropdown)
- Database View: Database View (dropdown)
- Environment: Select (dropdown)
- * Purge Export after days: 30 (text input)

Buttons: Save, Cancel

Improvements

Logic Builder APIs - Accept Property Name in get_member_prop_value API in addition to Property Label in parameters

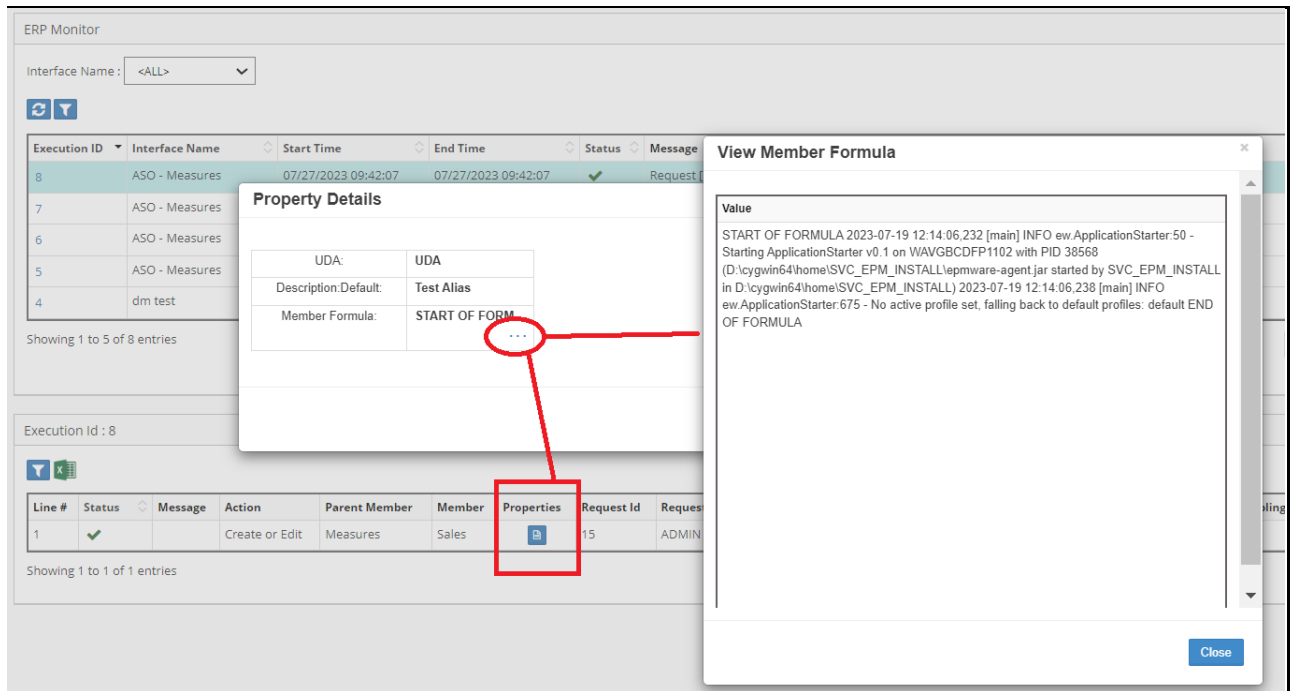

[EW-1651] - get_member_prop_value Logic Builder API which retrieves property value for a given member and a property earlier was expecting only property labels and was case sensitive. With this release API will accept either property label or property name in its parameter and will be case insensitive.

Essbase - Performance tuning of Deployment for Large Request (100K Request Lines)

[EW-1690] - If the request has a very large number of changes for Essbase Applications then deployment was very slow as well as holding up deployment of other applications. With this release performance of large request deployments has improved significantly as well as issues in the parallel deployment are also resolved.

ERP Import Monitor page - Show Large Member Formulas in the lines grid in a separate popup.

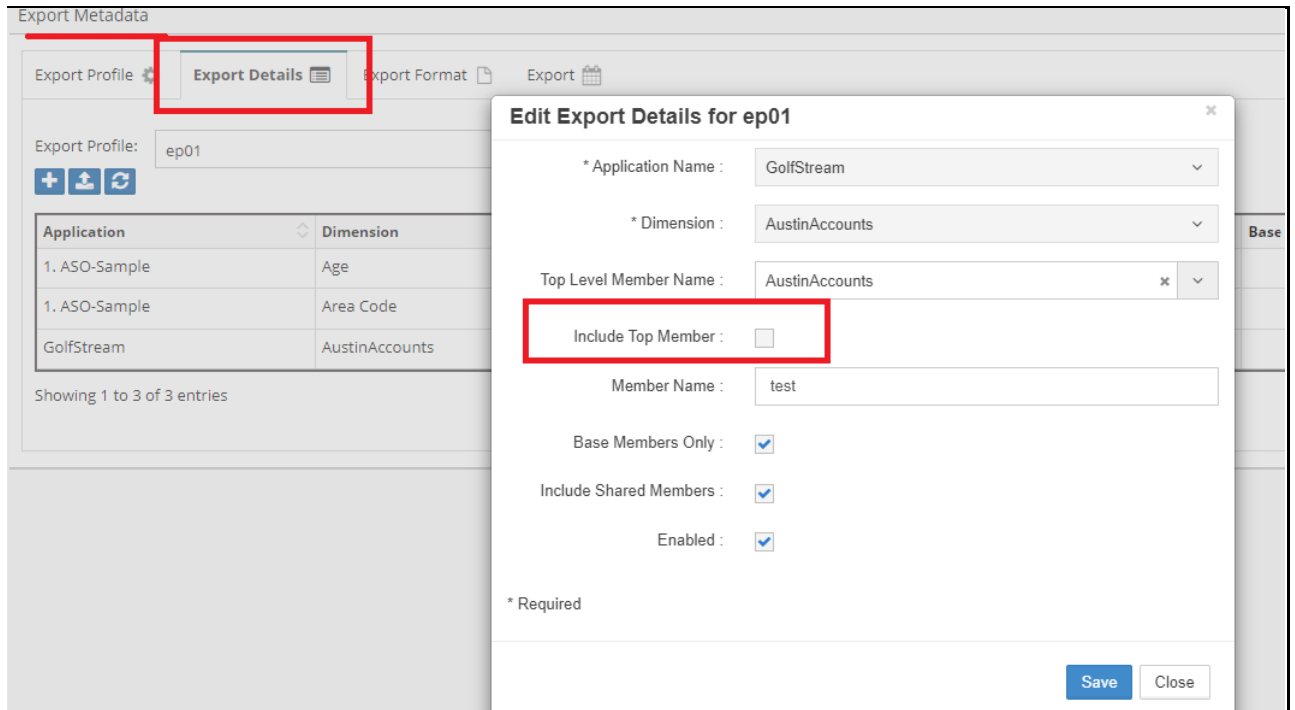

[EW-1744] - ERP Import Monitor page - show Large Member Formulas in the lines grid in a separate popup.

Add a configuration to include or exclude Top Member Name in the Export Details tab if the top member is specified.

[EW-1801] - Add a configuration to include or exclude Top Member Name in the Export Details tab if the top member is specified.

For example: If you export all descendants of “Assets” branch from the Account Dimension then you will select “Assets” as a Top Member Name in the Export Details configuration. But if you do not want to export the “Assets” member itself or want to include the “Assets” member in the Export file you can now use this new field.

Logic Builder APIs - Build two new APIs - Get Ancestors or get Descendants having specific property value

[EW-1809] - Two new Logic Builder APIs have been introduced to retrieve a list of Ancestors or Descendants of a given member which have specific property value for a specific property.

Package : **ew_hierarchy**

```

FUNCTION ancestors_having_prop_value
    (p_app_dimension_id IN NUMBER
    ,p_member_name      IN VARCHAR2
    ,p_prop_name        IN VARCHAR2 -- OR Property Label
    ,p_sep              IN VARCHAR2 DEFAULT ','
    )
RETURN VARCHAR2;

FUNCTION descendants_having_prop_value
    (p_app_dimension_id IN NUMBER
    ,p_member_name      IN VARCHAR2
    ,p_prop_name        IN VARCHAR2 -- OR Property Label
    ,p_sep              IN VARCHAR2 DEFAULT ','
    )
RETURN VARCHAR2;

```

Prevent Requests from being Recalled in the workflow while the request is being Deployed

[EW-1816] - Prevent Requests from being Recalled in the workflow if the request is being Deployed at the same time. If the deployment is running and a request is recalled then it creates a discrepancy between the request's deployment status.

Fixes

Deleting a Multi-Environment Mapping Record is not allowed if there is an associated application

[EW-1812] - Deleting a Multi-Environment Mapping Record is not allowed if an associated application issue is fixed. Users can delete Environment Mapping Record without having to remove applications in the mapping grid first.

OneStream - Percent Consolidation and Ownership properties should allow decimal values

[EW-1813] - OneStream - Percent Consolidation and Ownership properties should allow decimal values. Previously only Integer values were allowed.
