Release 25.12.102 Notes

Test Release Date: Dec 5th, 2025, **Production Release Date:** Dec 19th 2025

Agent Update

None

Introduction

EPMware Release 25.12.102

This is a minor release containing new features and enhancements to existing features, and API additions. The features of this release were developed to enhance the design capabilities, performance, and improve ease of use of applications. System administrators and users will benefit from the enhancements across their application.

New Features

EW-2395 – Capture Audit Details for Dimension Classes and Hierarchy Actions

Description:

Enhanced the audit logging framework to capture detailed audit information for **Dimension Classes** and **Hierarchy Actions** modules.

EW-2384 – Display Security Group Users on the Dashboard Review and Approve stages

Description:

Enhancements to the **Workflow Diagram** to improve usability and visibility of group users.

Bug Fixes

EW-2359 – Capture Audit Details for Environment Mapping and Dimensions

Description:

Audit functionality extended to capture change tracking for **Environment Mapping** and **Dimension** modules.

EW-2360 – Refactor Environment Mapping API to Support Audit Logging

Description:

The Environment Mapping API has been refactored to support consistent audit logging, ensuring all create, update, and delete operations are recorded in the audit tables.

EW-2380 – Extra Space Displayed for Alias Properties in Metadata Explorer**Description:**

Resolved an issue where **Alias-type properties** displayed an extra trailing space in the **Metadata Explorer** and **Request pages**.

EW-2403 – Member Formula Popup Closes After Validation Error**Description:**

If a validation fails for **Member Formula** type properties, the popup should remain open to allow users to correct the formula. Previously, the popup closed immediately upon error.

EW-2406 – Member Rename Not Reverting After Cancel or Delete**Description:**

Fixed an issue where canceling or deleting request lines related to a **member rename** did not revert the member name to its original value.

Scenario:

1. Create a request line to rename a member.
 2. Add other request lines referencing the same member (e.g., Edit Properties, Create Child, Insert Shared Member).
 3. Delete the Rename line (#1).
 4. The system now correctly reverts all related lines to display the **original member name**.
-

Improvements

EW-2379 – Logic Script Editor Font and Layout Improvements**Description:**

The Logic Script Editor font has been updated to **Courier New** for better text alignment and readability.
This provides a consistent, monospaced view for easier script editing.

EW-2383 – [Export Details] Option to Include or Exclude Member Properties**Description:**

Added a new checkbox option to **include or exclude member properties** during export

Option: Include Member Properties

- **Type:** Checkbox
- **Default:** ☒ Checked

EW-2385 – [Export Details] Enable/Disable Checkbox Editable in Grid

Description:

Users can now enable or disable exports directly from the **Export Details Grid**, similar to functionality available on other pages.

EW-2386 – Color and Position Settings for Environment Name in Global Settings

Description:

Added new configuration options in **Global Settings** to customize the color and position of the

Environment Name label displayed at the top-right corner, middle or top-left corner of the application.

Available Color Options:

- Blue (default)
- Green
- Red
- Orange
- Purple / Grey

These enhancements help users visually distinguish between different environments (e.g., *TEST*, *PROD*).

EW-2390 – Copy Code Icon Visibility in Property Configuration Popup

Description:

Improved visibility of the **Copy Code** icon in the Property Configuration popup.

The icon is now more prominent and positioned either below or next to the property label for clarity.

EW-2392 – Show Request IDs in Deployment Monitor Messages

Description:

Deployment Monitor now displays **Request ID(s)** directly in the **Message field**, allowing users to identify associated requests without clicking the Deployment ID.

This enhancement applies to both successful and failed deployments once completed.

EW-2394 – Expose Dimension Mapping Label in Logic Builder API

Description:

Introduced a new API variable in the Logic Builder (ew_lb_api.g_dim_mapping_label) to identify when a **Pre-Hierarchy Action Logic Script** is triggered as part of a **Dimension Mapping Logic Script**.

EW-2397 – [Metadata Request] Bulk Upload Failure Popup Button Labels

Description:

Updated the bulk upload failure popup for better clarity:

- Buttons changed from **OK / Cancel** → **Yes / No** to clearly indicate user intent when prompted to download the processed file.
-

EW-2399 – New API to Retrieve Property Values for All Child Members

Description:

Introduced a new API in the EW_HIERARCHY package (Logic Scripts module) to fetch property values for all child members of a specified parent.

API Details:

Package: EW_HIERARCHY

Function: get_child_member_prop_values

```
FUNCTION get_child_member_prop_values
(p_app_dimension_id IN NUMBER,
 p_parent_member_name IN VARCHAR2,
 p_prop_name IN VARCHAR2,
 p_unique_values_only IN VARCHAR2 DEFAULT 'Y',
 p_sep IN VARCHAR2 DEFAULT ',')
RETURN VARCHAR2;
```

EW-2404 – Member Formula Validation Enhancements for Planning and PBCS

Description:

Introduced standardized validation rules for **Member Formula Properties** in **Oracle Planning** and **PBCS** applications.

Validations Include:

- Members referenced within square brackets [] must be valid member names or aliases.
- All brackets (, [, { must have matching closing counterparts.

- For **BSO Plan types**, the last character of the formula must be a semicolon (;), excluding spaces or new lines.

EW-2407 – New API to Copy Member Branches Across Applications

Description:

Developed a new API for **Dimension Mapping Logic Script Types** to copy a branch (member and its ancestors) from one application to another when specific conditions are met.

For example, if a parent receives a child with a defined property or naming convention, the full branch can now be automatically created in the target application.

EW-2409 – Application Import Default Value Logic Correction

Description:

Corrected an issue in **Application Import** where the “Assign Default Value during App Import” setting incorrectly used the **Default Value** column instead of the **Default Value during Import** field.

Expected Behavior:

When “Assign Default Value during App Import” is enabled, the system should pull the value from

Default Value during Import, not from **Default Value**.

Applies to property configurations such as Attributes in Hyperion Planning applications.
