Release 24.07.85 Notes

Test Release Date: July 13th, 2024, **Production Release Date:** July 27, 2024

Agent Update

None

Introduction

EPMware Release 24.07.85

This is a minor release containing new features and enhancements to existing features, and API additions. The features of this release were developed to enhance the design capabilities, performance, and improve ease of use of applications. System administrators and users will benefit from the enhancements across their application.

Change Types	# of items
New Features	3
Improvements	2
Fixes	10
Total	15

New Features

Implement UDF Workflow filtering on the Request Page

[EW-2032] - Show User Defined Fields (UDF) for only certain workflows.

Workflow Filtering is a new feature which allows users to enable display of UDFs for specific workflows rather than all workflows as shown below.

Edit UDF1

* Display Type: Lookup

* Display Label: High Risk?

Lookup: EW_YES_NO

LOV SQL:

Workflow Filtering: ☒

* Workflow: Deploy Only

Default Value: Y

Description: TEST UDF

* Required

Save Cancel

Field	Enabled	Required	Data Type
UDF1	☒	☐	String
UDF2	☒	☐	Numerical
UDF3	☒	☐	String

Showing 1 to 3 of 3 entries

Add a new configuration in the Export Module to allow Pre Export Logic Script to be executed at the Node Level

[EW-2052] - New configuration in the Export Module to allow Pre Export Logic Scripts to be executed at the Node Level.

This feature will allow users to make a decision on whether to show a member or a node in the Export File or not based on stored and/or derived properties.

The screenshot shows the 'Edit Profile : 1ASO' dialog box. The 'Pre-Export Logic Script' field is highlighted with a red box and contains the text 'PRE_EXPORT_BY_NODE'. Below it, the 'Execute Logic Script by Node' checkbox is checked. The 'Export Format' is set to 'CSV'. The 'Export File Name' is set to '<EXPORT_PROFILE_NAME_DD_MON_YYYY_HH24_MI_EXPORT_EXECUTIC'. The 'Database View' is set to 'Database View'. The 'Use Export Tables' checkbox is checked. The 'Environment' is set to 'Select'. The 'Purge Export after days' is set to '30'. The 'Save' and 'Cancel' buttons are at the bottom right.

For example, if you need to generate an export file but only for those members where “OTP #” property which is a Derived Property (Not stored, Readonly and has a calculation behind this property value when displayed in the Explorer) is populated or not populated.

Simple Logic Script written as shown below and assigned to the Export as shown above helps achieve this requirement.

Logic Builder API Variable **ew_lb_api.g_exp_show_member** needs to be set. This API gets invoked for the current node being exported in the file and before it gets added this Logic Script can include or exclude it. Property values, member names etc. can also be referred to in this script type as well.

Note: Use PROP_NAME in logic scripts for this Pre Export Generation script type.

Scripts

Script Type: Pre Export Generation Tasks

Script Name: *

+

↺

Script Name	Script Type	Description
PRE_EXPORT_BY_NODE	Pre Export Generation Tasks	

Showing 1 to 1 of 1 entries

Script Name: PRE_EXPORT_BY_NODE

```

DECLARE
BEGIN
  -- Do not Include member in the Export
  -- if the following conditions qualify for the Member
  --
  IF ew_lb_api.get_member_prop_value('DERIVED_PROP_OTP_NUMBER') IS NULL
  THEN
    ew_lb_api.g_exp_show_member := 'N';
  ELSE
    ew_lb_api.g_exp_show_member := 'Y';
  END IF;
END;

```

Added an option for the Export Profile to optionally compress output file

[EW-2057] - By default we compress files generated for each and every export profile. However, If users prefer not to compress files then the option is now available. This option is not available if “Generate Separate file for each dimension” is enabled, as this option may generate more than one file.

Edit Profile : 1ASO

* Name: 1ASO

Description:

Enabled: ☒

Include Pending Requests: ☐

* Export Format: CSV

Column Delimiter: ☐ Comma ☐ Semicolon ☐ Tab ☐ Space ☐ Pipe ☐ Other

Text Qualifier:

Generate Separate Files: ☐

Compress File: ☐

* Export File Name: <EXPORT_PROFILE_NAME_DD_MON_YYYY_HH24_MI_EXPORT_EXECUTIC

Pre-Export Logic Script: Pre-Export Logic Script

Execute Logic Script by Node: ☐

Post-Export Logic Script: Post-Export Logic Script

Database View:

Save Cancel

Improvements

Bulk Upload Derived Property calculation errors for new members are now shown in the Request Activity log.

[EW-2049] - If there are errors in deriving property values during the Bulk Upload process then it will be very helpful for users to see all the errors in the Activity Logs of the request so users can review and fix them.

Add support for Statistical Properties in the Export where Export Tables (Fast Export) is not used

[EW-2063] - Add support for Statistical Properties in the Export where Export Tables are not used (Fast Export).

Fixes

Hierarchies with Properties report is failing for OneStream apps and Consolidated dimensions

[EW-1904] - Hierarchies with Properties report is failing for OneStream applications if the user selects consolidated dimensions of the Entity Dimension Class..

Insert Shared Member popup should be able to handle large flat hierarchy without crashing in the browser

[EW-2037] - Insert Shared Member popup should be able to handle large flat hierarchy without crashing in the browser.

OneStream - If member name is same as its dimension name then App Import does not process its member level properties

[EW-2043] - OneStream - In Consolidated dimension if the member name is same as Dimension name then Application Import ignores its member properties.

OneStream - In Consolidated dimension if the member name is same as Dimension name then it does not show up in Explorer

[EW-2037] - OneStream - In Consolidated dimension if the member name is same as Dimension name then it does not show up in Explorer.

OneStream - Shared instance creation fails for Consolidated type of dimensions in bulk Upload

[EW-2058] - OneStream - Shared instance creation fails for Consolidated type of dimensions in bulk Upload. Using Bulk Upload try to create a shared instance in Consolidated Dimensions where a member is never shared before in the dimension and is sourced from another Entity dimension. Bulk Upload should be able to process it.

New Members created via Post hierarchy Action Logic Scripts associated with Bulk Uploads do not create Default Properties for members

[EW-2059] - New Members created via Post hierarchy Action Logic Scripts associated with Bulk Uploads do not create Default Properties for members.

Bulk Upload validation should not throw errors if same member is being created with two diff lines - one for Create and the other using Create or Edit

[EW-2060] - Bulk Upload validation should not throw errors if the same member is being created with two diff lines - one for Create and the other using Create or Edit.

Hierarchy Type properties are not restored when a line is deleted in a specific case (Edit + Move and then deletion of Edit line)

[EW-2054] - Hierarchy Type properties are not restored when a request line is deleted in a specific case (Edit + Move and then deletion of Edit line).

Exact sequence of request lines are

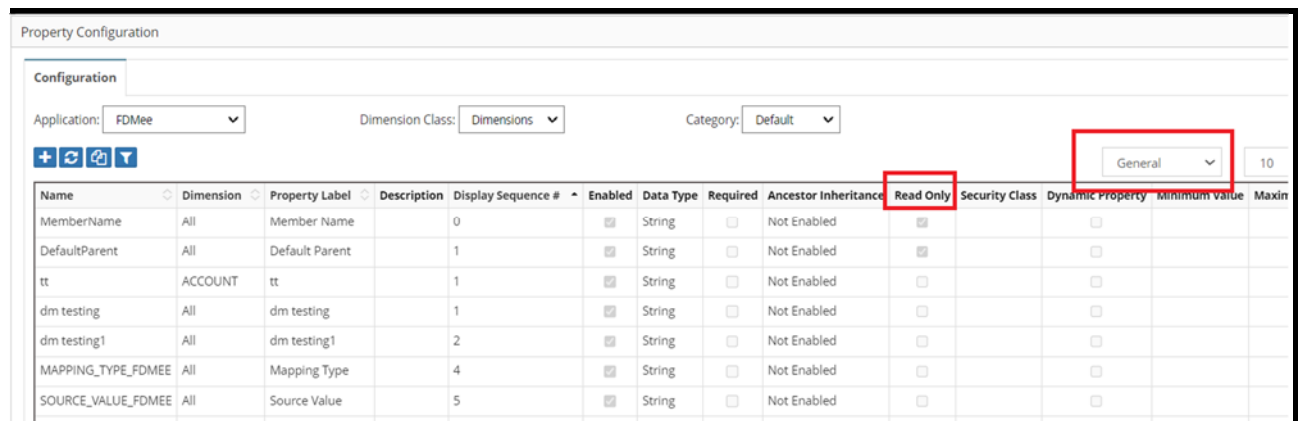

- Create a request line for the Edit action on a member
- Create a request line for the same member for Move Member action.
- Delete the Edit Properties request line
- If any of the properties were changed with the Edit action Hierarchy Type (For example, Data Storage and Consolidation properties in the Hyperion applications) then its values are not getting restored from the archives.

OneStream - Inserting a shared member using the Bulk Upload template for an extended dimension where the parent is from the main dimension throws an error – “Parent Member does not exist”

[EW-2054] - Using Bulk Upload Shared instances are being created in the OneStream application in an extended dimension where parent members are from the main dimensions then post validation process in the bulk upload fails with the error “Parent Member does not exist”.

Property Configuration Screen - Show Read Only Property in the Grid for All and General categories

[EW-2062] - Property Configuration Screen - Show Read Only Property in the Grid under All and General categories as shown below.
