Release 24.06.84 Notes

Test Release Date: June 7th, 2024, Production Release Date: June 21, 2024

Agent Update

None

Introduction

EPMware Release 24.06.84

This is a minor release containing new features and enhancements to existing features, and API additions. The features of this release were developed to enhance the design capabilities, performance, and improve ease of use of applications. System administrators and users will

benefit from the enhancements across their application.

Change Types	# of items
New Features	2
Improvements	5
Fixes	2
Total	9

New Features

Allow users to specify Default Value for UDFs under Global Settings

[EW-1876] - Allow users to specify Default Value for UDFs under Global Settings.

The following new fields have been added in UDF configuration for this feature.

Default Value can now be set when new requests are created.

In addition, Workflow Filtering is a new feature which allows users to enable display of UDFs for specific workflows rather than all workflows.

The screenshot displays the 'Edit UDF1' dialog box overlaid on the 'Global Settings' page. The dialog box contains the following fields and values:

- * Display Type: Lookup
- * Display Label: High Risk?
- Lookup: EW_YES_NO
- LOV SQL: (empty)
- Workflow Filtering: ☒
- * Workflow: Deploy Only
- Default Value: Y
- Description: TEST UDF

The 'Default Value' field is highlighted with a red box. The 'Workflow Filtering' checkbox and the 'Workflow' dropdown are also highlighted with a red box. The background shows the 'Global Settings' page with a table of UDFs:

Field	Enabled	Required	Data Type
UDF1	☒	☐	String
UDF2	☒	☐	Numer
UDF3	☒	☐	String

Showing 1 to 3 of 3 entries

Added new Report Group for Export Module and added 5 new reports.

[EW-2040] - In the audit Module, a new Report Group called “Export” is introduced to provide execution as well as configuration details for the export module.

The following reports are in this group:

- 1) Export Execution Details
- 2) Export configuration Details
- 3) Export configuration Details (Dimensions)
- 4) Export configuration Details (Format)
- 5) Export configuration Details (Properties)

Improvements

Add an Admin Report which allows users to gather Database Statistics on demand.

[EW-2001] - Add an Admin Report which allows users to gather Database Statistics on demand. This is useful when large application metadata is loaded and immediate performance improvements are needed.

While Navigating between Export Tabs removes filters if used in those tabs

[EW-2014] - While Navigating between Export Tabs removes filters if used in those tabs. With this release filters (like LOVs) will be remembered and hence users do not have to select them again.

Improve Performance of Large Bulk Upload processing.

[EW-2030] - Improve Performance of Large Bulk Upload processing

Show Vary By Props in the Display tab in the Property Configuration Grid.

[EW-2034] - Show Vary By Props in the Display tab in the Property Configuration Grid.

Allow deleted members to be recreated in the same request as long as Application property is enabled

[EW-2041] - Allow deleted members to be recreated in the same request as long as application property which allows activities on locked members in multiple requests is enabled.

Application Property name to be enabled if this feature is required is:
ALLOW_LOCKED_MEMBERS_IN_DIFF_REQUESTS

Fixes

OneStream - Deployment fails when new UD member is created and assigned to Entity dimensions in the same request under UD Constraint property

[EW-2043] - OneStream - Deployment fails when a new UD member is created and assigned to Entity dimensions in the same request under UD Constraint property.

Member Description Property popup in Dimension Configuration does not show correct Alias member

[EW-1796] - Member Description Property popup in Dimension Configuration does not show correct Alias member.
