Release 26.03.105 Notes

Test Release Date: Mar 13th, 2026, **Production Release Date:** Mar 27th 2026

Agent Update

A OneStream Agent update is required for OneStream Version 9.2 users.

Introduction

EPMware Release 26.03.105

This is a minor release containing new features and enhancements to existing features, and API additions. The features of this release were developed to enhance the design capabilities, performance, and improve ease of use of applications. System administrators and users will benefit from the enhancements across their application.

Bug Fixes

EW-2423 – Reports Do Not Prompt for Required Text Parameters

Description:

Reports did not prompt users to provide values for parameters of type **Text** when those parameters were flagged as **Required**.

Example:

Report: **Global Metadata Search**

Parameter: **Search Text**

The parameter is flagged as required, but users were able to submit the report without providing a value.

EW-2477 – Request Attachment Popup Displays Incorrect Date

Description:

The **Request Attachment** popup displayed the **current date** instead of the **actual date when the file was attached**.

This issue has been corrected.

EW-2480 – Increase Width of Lookup Upload Popup

Description:

When importing lookups using a CSV file, long lookup names caused the popup to wrap text onto multiple lines.

The popup size has been increased to better accommodate longer lookup names and improve usability.

EW-2487 – Compare Member Properties Report Adds Unnecessary Rows

Description:

For properties such as **Percent Ownership** and **Percent Consolidation**, the fractional component (e.g., .00) is normally removed during processing.

In some cases this step did not execute correctly, causing the fractional value to remain. As a result, the **Compare Member Properties** report incorrectly detected differences and inserted unnecessary rows.

Root Cause:

The logic used to detect fractional values (`LIKE '%.00'`) did not properly handle all cases, particularly when `.00` appeared within the string.

This issue has been fixed.

EW-2497 – ORA-06502 Error in Sync Report and Request Page

Description:

A client reported an **ORA-06502 Numeric or Value Error** occurring in two scenarios:

1. While running the **Sync Report**
2. When removing a property value on the **Request Page**

Example:

Property **Text2** (String type, “vary by dimension – text”) had values exceeding **2500 characters**, which triggered the error.

This issue has been resolved.

EW-2498 – Deployment Failure When Member Edited and Renamed in Same Request

Description:

Deployment failures occurred in **multi-environment deployments** when the following conditions were met:

- Workflow includes **multi-environment deployments** (e.g., UAT → PROD)
- Deployments occur at the **line level** (Essbase / OneStream)
- A **member is edited first and then renamed within the same request**

Observed Behavior:

- Deployment to **UAT** succeeds
- Deployment to **PROD** fails

Cause:

The deployment process incorrectly assumed the member had already been renamed in PROD after the UAT deployment and attempted to use the new name instead of the original member name.

This logic has been corrected.

EW-2500 – Errors After Saving Large Member Formula

Description:

Two issues were identified:

Issue 1:

Saving a long formula (~60,000 characters) using the **Save** button resulted in an unknown error.

Example reference: **Request ID 1125 in the Dev environment**

Issue 2:

After the error popup appeared, selecting another member triggered the “**Unsaved Changes**” popup twice.

Both issues have been resolved.

EW-2505 – Pre-Export Logic Script Uses Primary Node Property Value

Description:

In certain export scenarios where **Pre-Export Logic Scripts** run at the **node level**, the script incorrectly retrieved property values from the **primary node** when the **shared node** had no property record.

Example Scenario:

- Primary node property value = **Y**
- Shared node has **no property record**

The export logic evaluated the primary node property and incorrectly included the shared node in the export output.

This issue has been fixed in the **Logic Script engine** so the correct node context is evaluated.

EW-2518: New Attribute Member deployment to Essbase BSO apps fails with Illegal Share Illegal

Improvements

EW-2443 – Auto Refresh in Migration Monitor

Description:

Added **Auto Refresh** functionality to the **Migration Monitor** screen, similar to the functionality available in the Reports and Export monitors.

EW-2453 – Show Full Message Text in ERP Import Monitor

Description:

If the **Message** column contains text longer than the displayed width, the full message is now shown when users **hover over the record**.

EW-2464 – Reset Inherited Dimension Properties in OneStream

Description:

When metadata is cleared at the **application level** in OneStream, the following properties must also be reset to allow correct detection of dimension relationships during re-import:

- INHERITED_DIM
- INHERITED_DIM_LIST

This behavior has been implemented.

EW-2470 – Automatically Refresh Application LOV

Description:

When a new application is created and the user navigates to the **Properties tab**, the **Application LOV** did not refresh automatically.

Users previously had to refresh the entire page.

The LOV now refreshes automatically when navigating to the tab.

EW-2481 – New API Parameter for Updating Member Properties

Description:

The existing API in package **EW_REQ_API** required **Hierarchy ID** values when updating member properties.

A new API overload now allows users to pass **member names and parent member names** instead.

This API will create a request line automatically if the member is not already in **Edit action**.

API:

```
FUNCTION update_hierarchy_prop
    (p_user_id           IN NUMBER
    ,p_request_id        IN NUMBER
    ,p_app_dimension_id  IN NUMBER
    ,p_parent_member_name IN VARCHAR2
    ,p_member_name       IN VARCHAR2
    ,p_prop_label        IN VARCHAR2
    ,p_prop_value        IN VARCHAR2
    ,p_prop_value_clob   IN CLOB          DEFAULT NULL)
```

```

        ,p_vary_by_member_names IN VARCHAR2 DEFAULT NULL
        ,p_related_line_id      IN NUMBER    DEFAULT NULL
        ,x_msg                  OUT VARCHAR2
    )
RETURN VARCHAR2;

```

EW-2485 – Edit Member Properties in OneStream Extended Dimensions

Description:

Users can now **edit properties** for **extended members** in **Entity-class extended dimensions**.

Previously, operations such as **Delete** or **Rename** were restricted.

Example scenario:

- Entity Dimension Class includes **ConsolidatedSM**
- Members originate from source dimensions (e.g., **InPatient**, **OutPatient**)

Users can now edit properties such as:

- Description (Alias type)
- Currency
- Member formulas

Property updates correctly synchronize with the source dimension member.

EW-2486 – Compare Reports Support Same Application Dimensions

Description:

The following reports now support comparisons between **two dimensions within the same application**:

- Compare Members Report
- Compare Hierarchies Report

Previously, comparisons required **two different applications**.

EW-2488 – Allow Moving Extended Members Under Local Parent Members

Description:

The **Move Member** action is now allowed in **extended Entity dimensions** when:

- The member being moved is an **extended member**
- The **source parent** and **target parent** are **local members**

Bulk Upload supports the same operation.

Deleting the request line restores the original hierarchy structure.

EW-2499 – OneStream Version 9.2 Support

Description:

EPMware now supports **OneStream Version 9.2**.

Notify EPMware when upgrading so adapter updates can be applied if required.

EW-2506 – Support for OneStream Exclusion Security Groups

Description:

Support has been added for **Exclusion Security Groups** in OneStream.

Updates include:

- Application Import processing for Exclusion Groups
- Member security properties supporting Exclusion Groups
- Deployment of Exclusion Security Group assignments

Note:

This feature requires **updated integration DLLs** (separate DLLs for OneStream **8.x** and **9.x**).

EW-2516 – Allow Member Creation Under Root Node in Extended Dimensions

Description:

Previously, creating a member directly under the **root node** in an **extended dimension** caused deployment failures.

This issue has been resolved, and member creation under the root node is now supported.
