Release 23.03.69 Notes

Test Release Date: March 27, 2023, **Production Release Date:** April 7, 2023

Agent Updates

None

Introduction

EPMware Release 23.03.69

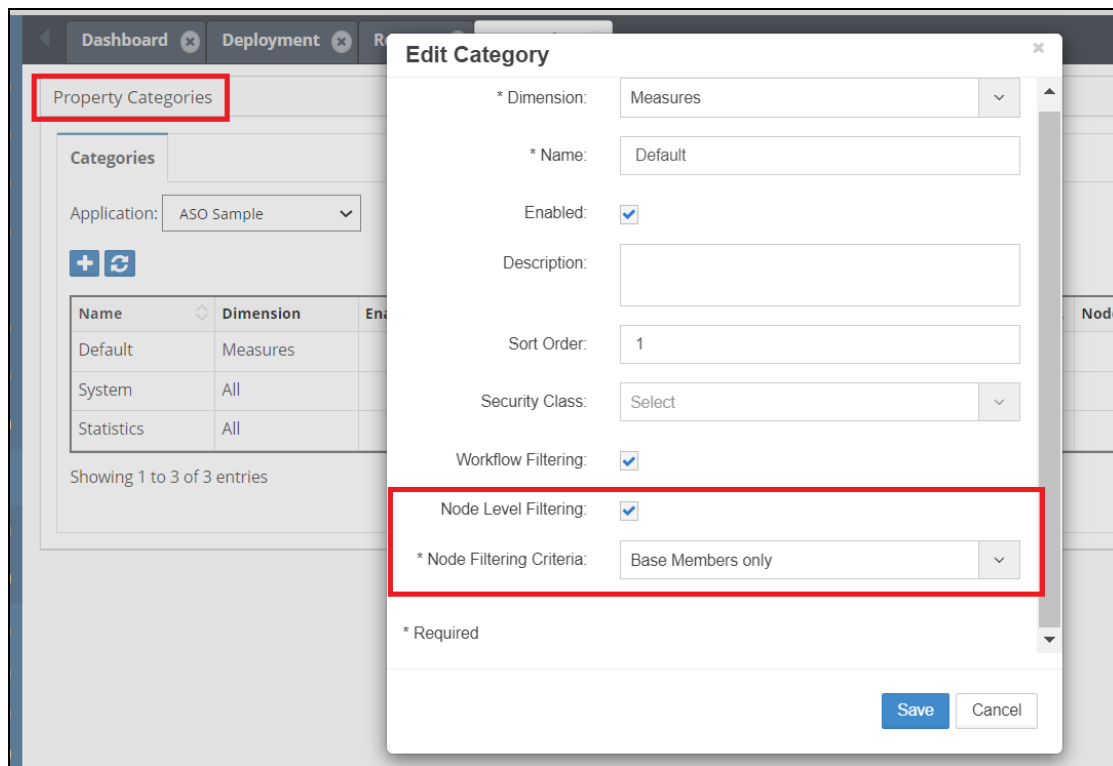

This is a minor release containing new features and enhancements to existing features, and API additions. The features of this release were developed to enhance the design capabilities, performance, and improve ease of use of applications. System administrators and users will benefit from the enhancements across their application.

Change Types	# of items
New Features	3
Improvements	5
Fixes	3
Total	11

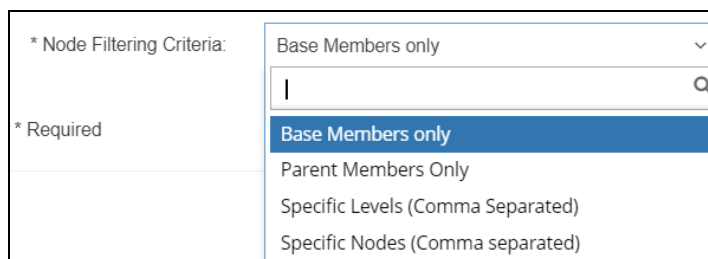

New Features

Allow users to configure Node Level Filtering for Property Categories

[EW-1657] - Allow users to configure Node Level Filtering for Property Categories. Allows Users to display specific property categories for certain levels or nodes in the hierarchy.

Options for the Filtering Criteria are as shown below.

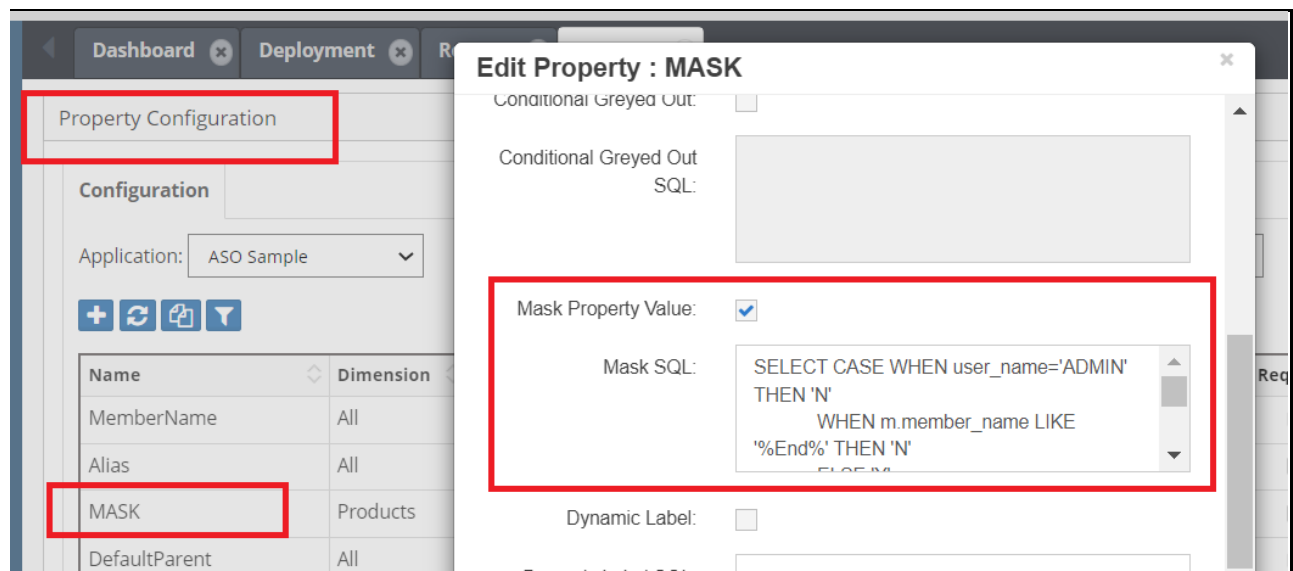

Mask Property Values using SQL

[EW-1669] - Mask Property Values depending on certain conditions using SQL. If there is a requirement to mask member's certain property values under certain conditions. For example, users in specific groups. Using Mask SQL, property values of that member can be masked. These settings are configured in the Property Configuration screen under the Display tab.

For example, the custom property MASK has masking enabled. Requirement is if the current user is either ADMIN or the member name with the word "End" in it then show this property's values, else do not show them. In other words, if the user is an Admin, then no need to mask property values. All other users should be allowed to see the values as long as member names has word "End" in it.

See example below:

Example SQL logic:

```
SELECT CASE WHEN user_name='ADMIN' THEN 'N'
            WHEN m.member_name LIKE '%End%' THEN 'N'
            ELSE 'Y'
            END mask_prop
FROM ew_users u, ew_members m
WHERE u.user_id = :user_id
AND m.member_id = :member_id
```

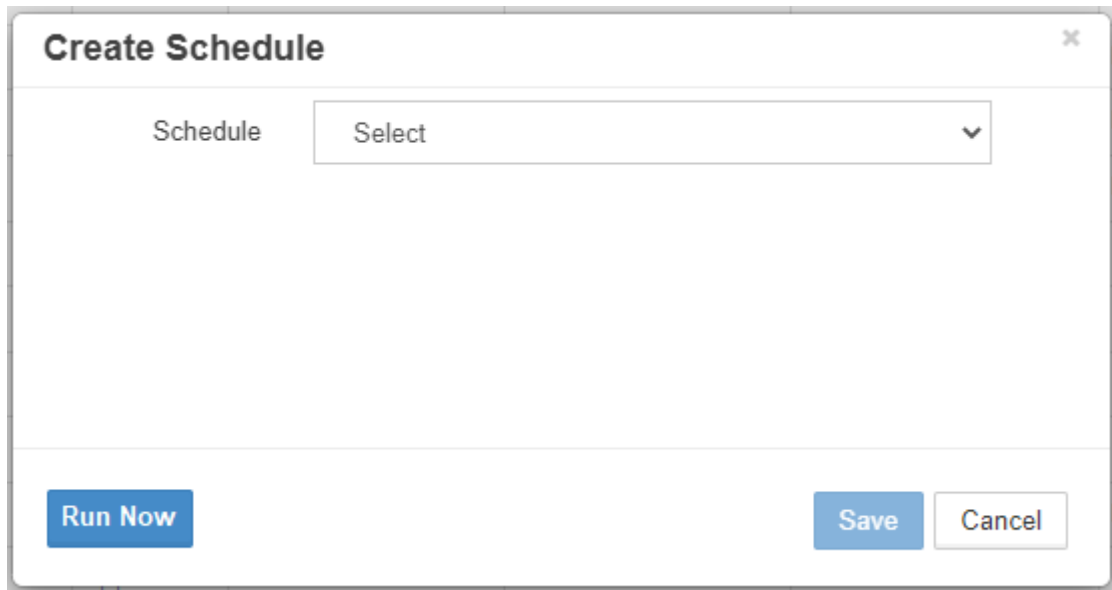

The following variables can be used in SQL where values will be replaced at run time.

Variables are case sensitive.

Variable	Description
:user_id	Current user's user id
:member_id	Selected Member ID
:app_id	Application ID
:app_dimension_id	Application Dimension ID
:member_name	Member Name
:hierarchy_id	Node ID (id that provides member and parent member combination id)
:prop_name	Property Name

Add "Run Now" option for Deployments, ERP Import modules

[EW-1694] - Add "Run Now" schedule for Deployments, ERP Import modules.

A screenshot of a 'Create Schedule' dialog box. The dialog has a title bar with 'Create Schedule' and a close button. Inside, there is a label 'Schedule' followed by a dropdown menu showing 'Select'. At the bottom, there are three buttons: 'Run Now' (blue), 'Save' (blue), and 'Cancel' (white with a grey border).

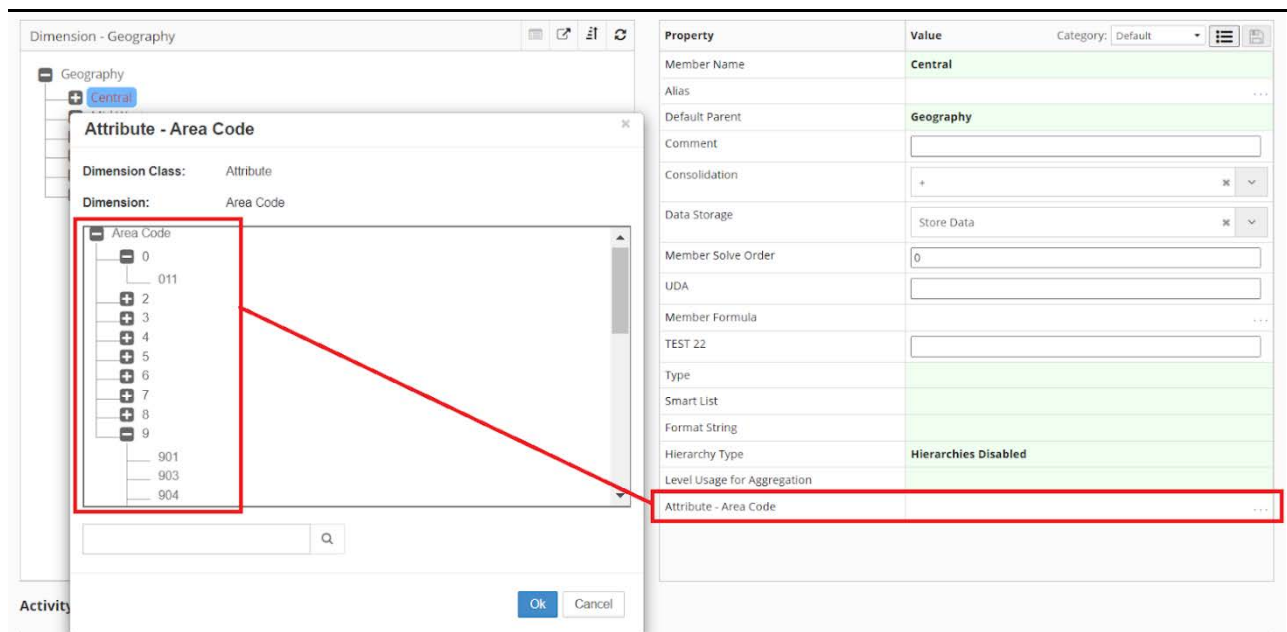

Create Schedule	
Schedule	Select
Run Now Save Cancel	

Improvements

Apply # of nodes restriction in the "Single Member Selection" Property Popup

[EW-1649] - Apply # of nodes restriction in the "Single Member Selection" Property Popup.

If a parent member has direct descendants which are more than the Global Settings of “# of records to display per page” then the same setting will be applied here. For example, see below. “Attribute Area Code” is an associated property with display type “Single member Selection” and hence a popup is shown. If “# of direct” descendants for any parent member is significantly larger than Global Setting (for example 500) then it will show pagination.

Increase the Width of the LOV on the Export Tab on the Export Page for Export Profiles

[EW-1689] - Increase the Width of the LOV on the Export Tab on the Export Page. Also, allow users to enter text in the LOV to make it easier to select a profile.

Export Metadata

Export Profile Export Details Export Format Export

Export Profile: ASOGEN

Allow users to Run Export from the Audit Module

[EW-1696] - Allow users to Run an Export from the Audit Module. A New Report is added in the Audit module in the “Metadata” group named “Export Metadata”. Admins can configure Export Profiles and allow end users to run them without having to add users in the groups who have Configuration access.

Reports

Report Group: Metadata Reports: Export Metadata Report Format: HTML [Submit Report](#)

Report Parameters

Export Profile Name: Select

Bulk Upload - If Parent Member is not specified then take the current parent member for the Move Action

[EW-1719] - Bulk Upload - If the Parent Member is not specified then take the current parent member for the Move Action. Before this fix, users had to specify the current parent member name in the “Parent” column and new Parent member name in the “Moved to member” column. With this release users can keep the Parent column value blank for the Move action lines.

The Dashboard will not be displayed to users who only have access to Metadata Explorer.

[EW-1692] - Users who have access only to Metadata Explorer (none of the Roles such as Requestor/Reviewer/Approver assigned) these users should not be shown the Dashboard screen.

Fixes

Users should not be allowed to change workflow after creating a request line

[EW-1707] - Users should not be allowed to change workflow after creating a request line. Currently, users can do so immediately after creating a request line.

Expand Native user names to 30 characters rather than 20

[EW-1682] - Allow Native users to have up to 30 characters rather than 20.

A Formula that was removed in a OneStream Application, was still shows under the Stored Item list

[EW-1726] - Formula if removed in the OneStream Application still shows under Stored Item list.
