Release 24.03.81 Notes

Test Release Date: March 8, 2024, **Production Release Date:** March 12, 2024

OneStream DLL Update

A OneStream DLL file update is required with this release

Introduction

EPMware Release 24.03.81

This is a minor release containing new features and enhancements to existing features, and API additions. The features of this release were developed to enhance the design capabilities, performance, and improve ease of use of applications. System administrators and users will benefit from the enhancements across their application.

Change Types	# of items
New Features	4
Improvements	8
Fixes	8
Total	20

New Features

Manage Security Group dimension for OneStream Applications

[EW-1973] - Security Groups can be managed and deployed using EPMWARE after this release. If you already have Security Groups Dimension imported then it may be required to be re-imported to this specific dimension.

Allow users to Clone Export Configurations

[EW-1951] - Allow users to copy the Export Profile and save it as a new profile based on the source profile.

In Export Configuration screen select export profile and using right click menu option “Save As” users can clone it.

In the Export Details configuration allow the same dimension to have multiple top member nodes

[EW-1954] - In the Export Details configuration the same dimension with multiple top member nodes should be allowed. This feature will allow users to export more than one branch of a dimension rather than just one branch within a dimension.

Allow Derived Properties for Exports

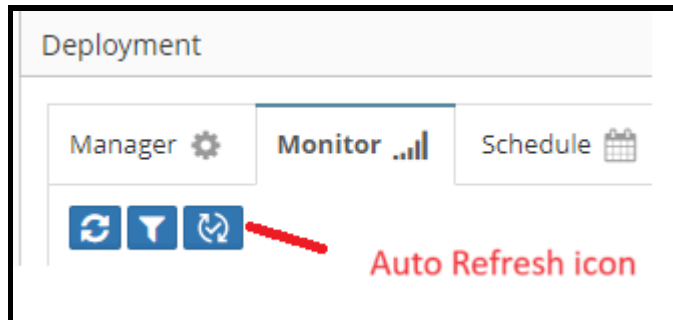

[EW-1968] - Include Derived Properties with derived values to be part of Export Generations.

Improvements

Add Auto Refresh feature

[EW-1216] – The following screens will have the auto refresh the feature. Default setting for auto refresh frequency is 5 seconds. The can be set in Global Settings.

1. Deployment Monitor
2. Report
3. ERP Import Monitor

Global Settings

Global Settings

Email

Application

Web

User Defined

Option	
Application Import - Total Interval in Seconds before TimeOut	600
Application Import - sleep interval in Seconds	60
Auto Refresh Interval (Seconds)	5
Database Trace Identifier	ew_trace

Allow users to delete/cancel all request lines without deleting request header

[EW-1505] - If a user has created a request using bulk upload and would like to delete all lines and retry the file then often the user ends up deleting the whole request rather than deleting one line at a time. To help address this issue, a new header level option has been added called "Delete All Lines". This option will delete all request lines but will keep the request header level information as is.

Allow users to delete/cancel mapped lines in the request but throw specific Warning message

[EW-1955] - Allow users to delete/cancel mapped lines in the request but throw specific Warning messages. By choosing this option users will be overriding mapped lines due to business requirements. Warning message will indicate that the line being deleted or canceled is linked to a source line.

Add Logic Builder parameter to indicate whether Property Validation is happening when Request is being submitted in the workflow or manual updates

[EW-1960] - Added new Logic builder Parameter "**ew_lb_api.g_on_submit_check**" that is useful when building complex logic scripts. Using this parameter property validation script can determine if the script is being executed when the user is updating that property manually OR when a request is being submitted into the workflow.

Show Export Profile name when user deletes it.

[EW-1964] - Show Export Profile name when user deletes it. This will help users which export profile they are deleting.

Add support to 9 new Properties of the Scenario Dimension in the latest OneStream version 8.x.

[EW-1972] - Add support to 9 new Properties of the Scenario Dimension in the latest version (8.x)

1. Property Category "Settings" - Two new properties
 - a. Allow Input into the Aggregated Consolidation Member
 - b. Use Input Frequency Data In Lower Frequencies
2. New Property Category "Hybrid Data Source" has 7 new properties.

Note: For existing customers these properties need to be added manually in their EPMware OneStream Applications.

Synchronize Hierarchies Report – added support for e Primary versus Shared nodes checking between source and the target apps

[EW-1975] - Report has been enhanced to handle various scenarios when members need to be flipped from primary to shared and vice versa between source and the target applications..

New Logic Builder APIs

Package EW_STRING

The purpose of this function is to compare values of two strings either numerically OR text basis and return Y or N.

```
FUNCTION compare_value (p_str1      IN VARCHAR2
                        ,p_str2      IN VARCHAR2
                        ,p_numerical IN VARCHAR2 DEFAULT 'N'
                        ,p_case_match IN VARCHAR2 DEFAULT 'Y'
                        )
RETURN VARCHAR2;
```

Fixes

Statistical properties which determine Generation and Level information throws ORA error if the dimension has cyclical metadata

[EW-1961] - Statistical properties which determine Generation and Level information throws ORA error if the dimension has cyclical metadata. Cyclical metadata occurs when a member has its parent member as its own child member. The system will provide a more user friendly message.

Export Format adds "Is Active" property for Generic applications even if Dimension of that app has Activate action disabled

[EW-1965] - Export Format adds "Is Active" property for Generic applications even if Dimension of that app has Activate action disabled

Exclude display of the member itself in the Ancestors property in the Statistics property category

[EW-1967] - Exclude display of the member itself in the Ancestors property in the Statistics property category.

Deleting Metadata for a Dimension does not clear Request lines pertaining to that dimension.

[EW-1970] - Deleting Metadata for a Dimension does not clear Request lines pertaining to that dimension

Fix Bulk Upload issue where member is being moved as well as being edited in the same file

[EW-1976] - Fix Bulk Upload issue where member is being moved as well as being edited in the same file

Hierarchies with Properties Report throws ORA error if dimension has Very Large Member Formulas and Report Output is CSV

[EW-1979] - Hierarchies with Properties Report throws ORA error if dimension has Very Large Member Formulas and Report Output is CSV.

Exporting Metadata in the Migration module fails if member property has > 2000 characters

[EW-1980] - Exporting Metadata in the Migration module fails if member property has > 2000 characters.

Report Parameters for Synchronize Hierarchies Report after submission shows incorrect values for parameters

[EW-1981] - Report Parameters for Synchronize Hierarchies Report after submission shows incorrect values in parameters.
