Release 26.05.107 Notes

Test Release Date: May 8th, 2026, **Production Release Date:** May 22th 2026

Agent Update

A OneStream agent update is required with this release.

Introduction

EPMware Release 26.05.107

This is a minor release containing new features and enhancements to existing features, and API additions. The features of this release were developed to enhance the design capabilities, performance, and improve ease of use of applications. System administrators and users will benefit from the enhancements across their application.

EPMware Software Release Notes – Version 26.05.107

May 2026

Bug Fixes

EW-2529 – Essbase Standard Validation Checks Incorrect Member Name for Restricted Characters

Description:

The Essbase Standard Validation Script incorrectly validated the **Parent Member Name** for restricted characters instead of validating the **new member being created**.

The validation logic has been corrected to properly validate the new member name.

Restricted characters include:

- Double quotes (")
- Square brackets ([])
- TAB characters

EW-2530 – OneStream Deployment Failure with More Than 50 Shared Members

Description:

OneStream deployments failed when a request contained more than **50 Insert Shared Member** actions, either under a single parent or across multiple parents.

Root Cause:

Deployment file generation was not properly closing files associated with shared member creation. After 50 open files, database errors occurred.

Fix:

Deployment files are now properly closed during processing.

EW-2536 – Oracle Fusion Cloud Deployment Failure with Multiple Large Dimensions

Description:

Deployment to Oracle Fusion Cloud applications failed when requests included multiple large dimensions.

Fix:

Deployment file generation has been corrected to ensure:

- No duplicate files are generated per dimension
- All deployment files are created accurately
- ZIP package contents are validated correctly for each dimension

EW-2538 – Incorrect Export Record Count When Removing Duplicates

Description:

The export footer field <EXPORT_RECORD_COUNT> displayed incorrect values when the “**Remove Duplicates Using Property Values**” option was enabled.

This issue has been corrected.

EW-2539 – OneStream Deployment Failure for Members with Internal ID = 0

Description:

In OneStream, member ID sequences can begin with **0**.

When users attempted to edit members with an internal ID of 0, the deployment adapter failed to recognize the member as valid.

This issue has been resolved.

Improvements

EW-2490 – OneStream Extended Dimension Clone Member Enhancements

Description:

In OneStream applications, when the **Clone Member** action is performed on an extended member within an **Entity Dimension**, the cloned member will now:

- Be created in the **source dimension**
 - Automatically create an extended node in the current dimension
 - Copy all member properties correctly, including:
 - Formula properties
 - Alias properties
 - Other supported property types
-

EW-2532 – Migration Import Performance Improvements

Description:

Performance improvements have been implemented for Migration Import processing, particularly for **Property Configuration artifacts**, which previously took longer than expected to import.

EW-2540 – Performance Improvements for Very Large Bulk Upload Files

Description:

Optimized Bulk Upload processing for very large files containing operations such as:

- Create Member
- Edit Member Properties

Enhancements improve handling of files exceeding **25,000 lines**.

Note:

Performance may vary depending on customizations such as:

- Custom or standard property validations
- Derivations
- Pre/Post Hierarchy Action logic scripts

EW-2544 – Updated Report Title for SQL Validation Report

Description:

The report title:

Property Configurations - Validations

has been renamed to:

Property Configurations - Check SQL Syntax

The updated title more clearly reflects the purpose of the report, which validates SQL configurations such as:

- LOV SQL
- Dynamic Gray-Out SQL
- Default Value SQL
- Other property-related SQL configurations
