Release 25.11.101 Notes

Test Release Date: Nov 7th, 2025, **Production Release Date:** Nov 21st 2025

Agent Update

None

Introduction

EPMware Release 25.11.101

This is a minor release containing new features and enhancements to existing features, and API additions. The features of this release were developed to enhance the design capabilities, performance, and improve ease of use of applications. System administrators and users will benefit from the enhancements across their application.

New Features

EW-2336 – New Application Adapter for Databricks

Description:

Introduced a new REST API integration with **Databricks** to retrieve and process data through the Database API.

Key Details:

- Developed REST API to connect with Databricks REST endpoints.
- Follows existing design patterns from AWS and ERP integrations for consistency.
- All configuration values are externalized in property/configuration files (no hardcoding).
- Retrieves and passes **CLOB** data from Databricks REST API to the Database API for parsing and ERP import processing.
- Implemented robust logging and error handling.

Acceptance Criteria:

- Successful connection to Databricks REST endpoints.
- Proper retrieval and processing of CLOB data.
- Verified data transfer to Database API.

Bug Fixes

EW-2364 – Server Configuration Page: Spinner Continues After Cancel

Description:

When testing a connection on the Server Configuration page, if the user clicks **Cancel** before the operation completes, the dialog closes but the spinner continues spinning indefinitely.

EW-2365 – Support for AWS IAM Role-Based Connection to S3

Description:

Enhancements made to support additional AWS S3 connection types and SDK updates.

- Added support for **Assume Role ARN** authentication.
 - Added support for **KMS-encrypted S3 buckets**.
 - Migrated from **AWS SDK v1** to **AWS SDK v2** for improved stability and performance.
-

EW-2368 – Hierarchy Type Properties Not Deployed After Recall and Move

Description:

Affected Applications: Essbase and OneStream

Scenario:

1. Create a new member with hierarchy type properties (e.g., **Data Storage, Aggregation Weight**).
2. Ensure the workflow includes a **Review** or **Approve** stage after **Deploy** to allow recall.
3. Deploy the member, then recall it to the start.
4. Move the member to a new parent and redeploy.

Fix:

Hierarchy type properties are now correctly included in the deployment file and redeployed successfully after recall and move actions.

EW-2370 – Large Essbase Deployments Not Marking as Completed

Description:

When deploying large Essbase requests containing multiple dimensions (e.g., Attribute and Geography), the deployment occasionally failed to mark the request as “Completed” even though the deployment succeeded.

- Typically observed when smaller dimensions (e.g., Attribute) deploy first, and larger ones (e.g., Geography with 2,000+ lines) remain pending.
 - Resolved by improving post-deployment completion status checks.
-

EW-2372 – Synchronize Hierarchies Report Filtering Issue**Description:**

The **Synchronize Hierarchies Report** did not filter rows correctly when **Top Member Name** parameters were provided. This issue has been fixed.

EW-2382 – Insert Member Action Error in Consolidated Dimensions (OneStream)**Description:**

When using the **Insert Member** action to create members in **Consolidated-type Entity Dimensions** (e.g., *ConsolidatedSM*), the system previously attempted to include child members, resulting in errors.

Fix:

Child members are no longer unnecessarily included. Extended members in consolidated dimensions are now handled correctly.

Example scenario:

- Parent dimension: *OutPatient* (**Application:** *SM_OS*)
- Consolidated dimension: *ConsolidatedSM*
- When inserting a member from *OutPatient*, child members are no longer pulled since they are automatically displayed in the consolidated dimension.

Enhancements

EW-630 [Report] After report is submitted it should auto scroll down to the execution grid

Description

Auto scroll to executions grid after report is submitted.

EW-1464 Use Default Pagination Size to 10 for all grids

Description

Currently, we have default page size of 25 and hence hides Page # as well as horizontal bar at the bottom.

If we use default page size of 10 (We can introduce 15 to show maximum # of rows without losing bottom horizontal scroll bar and its page #s), we can properly show the page with all pieces without having users to flip through page size.

Impacted grids are

- 1> Deployment Manager
- 2> Deployment Monitor
- 3> Property Configuration
- 4> Hierarchy Actions
- 5> Property Validations
- 6> Property Derivations
- 7> Email Templates
- 8> Workflow Tasks

EW-1679 Add option in the ERP Import and in Bulk Upload to allow Edit Member Properties as well as Move Member in a single transaction

Description

Currently, we have Create or Edit options in the action code mapping and works great. But if users want to move members automatically when we load file then currently we have to write Pre ERP Import Logic Script.

If we provide another option called "Create or Edit or Move" (OR Create,Edit,Move) then this will reduce logic script development work.

EW-2245 In the Dashboard - show users of the Group for Review/Approve stages in the workflow diagram

EW-2325 Show Option to Provide Custom File Name on Migration Screen

Description

On the Migration screen, when the user clicks Export, show an option asking if they want to provide a custom export file name (.xml). If not, use the current default file name.

This change will help users easily identify files when doing multiple exports.

EW-2354 Show 50 Properties in ERP Import Monitor screen

Description

Currently, we show only up to 30 properties in the ERP Import Property popup.

A couple of years back we increased # of properties to 50 from 30.

Example See below. Customer has setup 40+ Properties in the ERP Import Mapping screen and when import is run it shows only 30 properties.

EW-2371 Add Top Member Name Parameter in the "Compare Member Properties" Report. Also, add Property Label Wildcard parameter.

EW-2374 Password Not Matching Error Message

Description

If the user enters an incorrect password in the "Confirm Password" field they get an error message, but when they fix the error and enter the correct matching password the error message persists until the user clicks away somewhere. The behavior should be: after the correct matching password is entered the error should immediately go away and not require the user to click away in another text box etc.

EW-2378 2 fixes for Exports with Planning/PBCS Export Type. Deploy Property Name to be used and exclude non-deployable property.

Description

1. show "Deploy Prop Name" in export file headers if populated .(This is required for props like "Member Formula property" where Prop Name , Prop Label and Deploy Prop Names are different)
2. Exclude properties marked as **non-deployable** from the export (example, for Version Dimension, Plan Type is not eligible property for deployment.)

EW-2391 Provide user friendly error message in ERP Import when file has duplicate records for New members**Description**

If the ERP Import file as shown below as an example, has duplicate records for new members then it shows message ORA errors in it and message is technical like Unique Constraint violated. It should be more user friendly message like "Duplicate records found for new members".

Parent	Name	Action	Comment
Profit	HK_Test	Create	DS T dd
Geo	HK_Test	Create	DS T dd
