Release 23.11.77 Notes

Test Release Date: November 3, 2023, **Production Release Date:** November 17, 2023

Agent Updates

None

Introduction

EPMware Release 23.11.77

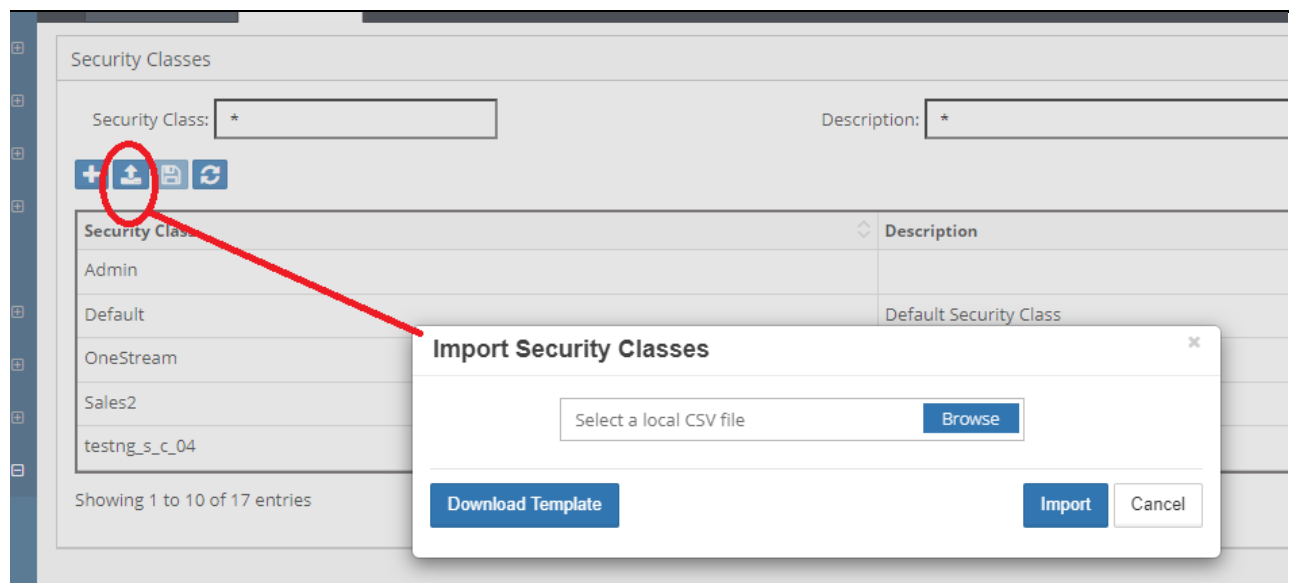

This is a minor release containing new features and enhancements to existing features, and API additions. The features of this release were developed to enhance the design capabilities, performance, and improve ease of use of applications. System administrators and users will benefit from the enhancements across their application.

Change Types	# of items
New Features	3

Fixes	4
Total	11

New Features

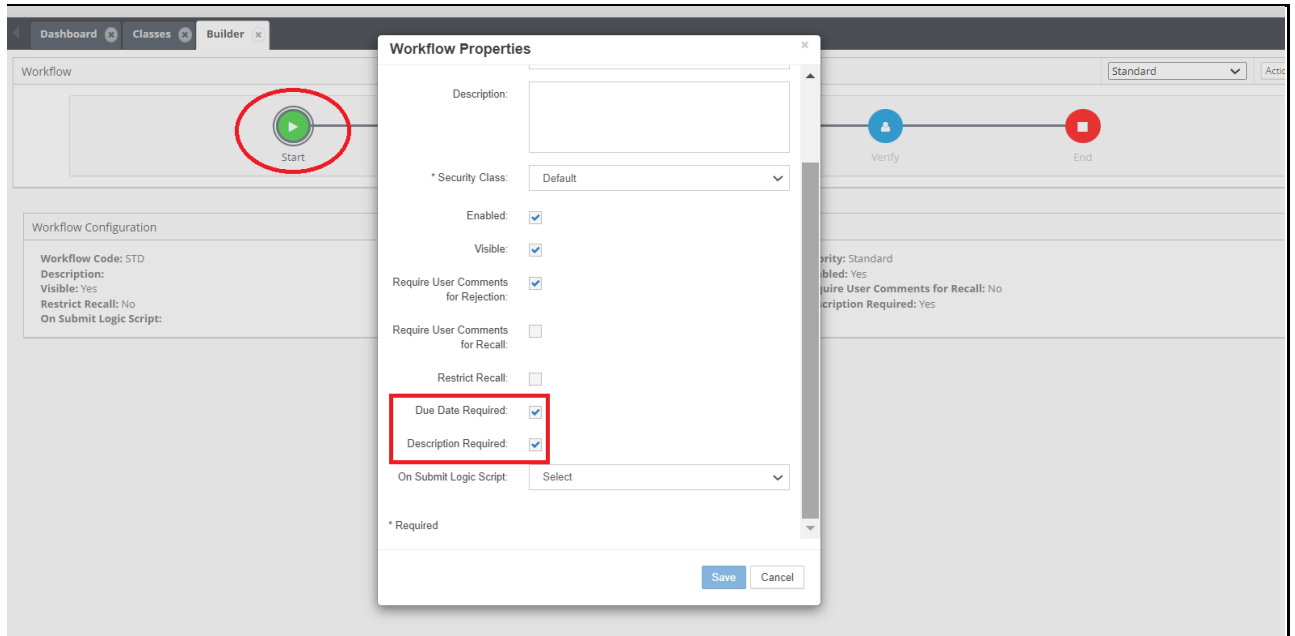

Allow users to upload Security Classes using CSV file in the "Security Classes" screen

[EW-16143] - Allow users to upload Security Classes using CSV file on the "Security Classes" screen.

Enhanced Workflow to make Due Date and Description fields optional

[EW-1775] - Enhanced Workflow to make Due Date and Description fields optional. When a user submits the request in the workflow and if these fields are not populated with values then an error message will be displayed.

Increase Member Name length from 100 Characters to 200 Characters

[EW-1775] - Increased Member Name length from 100 Characters to 200 Characters. If custom logic scripts have created local variables of size 100 characters for member name and if application has > 100 character length member names then please update your custom logic scripts to change it to 200 characters.

Improvements

Dashboard improvements - Display Workflow Name, Remove Priority and only show UDA's if enabled

[EW-1869] - Dashboard columns improvements - Show Workflow Name, Remove Priority and only show UDA's if enabled

Requests									
☒ My Actions Required ☐ My Requests ☐ All Open Requests ☐ All Requests				Requested By: <All>		Request ID:			
Request Id	Requested By	Description	Status	Workflow Name	Workflow Stage	Workflow Status	Request Date	Due Date	JIRA #
107	EPMWARE Administrator		New	Deploy Only		Pending Submission	11/03/2023		
106	EPMWARE Administrator	Test Reject Issue	Submitted	Standard	Review	Rejected	11/03/2023	12/08/2023	
105	EPMWARE Administrator		New	Deploy Only		Pending Submission	11/02/2023		
103	EPMWARE Administrator		New	Deploy Only		Pending Submission	11/02/2023		
102	EPMWARE Administrator		New	No Deploy		Pending Submission	11/01/2023

Add Logic Builder API to Get Level of a member using dimension id and parent member name

[EW-1865] - Add Logic Builder API to Get Level of a member using dimension id and parent member name.

Package : EW_HIER_STATS
Function : GET_LEVEL
Returns Level of a member
(0 means Base Member, 1 means Parent, 2 means Grand Parent and so on)
Parameters : (p_app_dimension_id ,p_member_name)
Call example: ew_hier_stats.get_level(p_app_dimension_id, p_member_name)

Allow users to reject more than one request line in a request.

[EW-1881] - Allow users to reject more than one request lines in a request..

Fixes

Saving Member Properties on a Request clears property values if there are validation errors

[EW-1858] - Saving Member Properties on a Request clears property values if there are validation errors. For example, if a user edits property values and saves them and if validation errors are shown then new property values are refreshed with existing property values. This issue is fixed now.

Export Details Tab - Removing Properties in the Popup and adding them back under a different property category throws an error

[EW-1863] - Removing properties and adding them back in the Export Details page (Properties popup) under a different property category shows an error message which is invalid as it should allow users to add property back in the popup.

Multiple Export Configurations for the same dimension causes duplicate records in the export file

[EW-1864] - Multiple Export Configurations for the same dimension causes duplicate records in the export file.

Multiple Deployments scheduled for the same application at the same time using the “By Requests” option may not deploy requests.

[EW-1870] - Multiple Deployments scheduled for the same application at the same time using By Requests option may not deploy all requests

Example:

- 1> Create two requests for the same app and the same dimension.
 - 2> Both requests should be scheduled to be deployed back to back immediately using the Run Now schedule.
 - 3> Both requests should go in sequence as they both are going to the same app.
- Before this fix both requests were waiting for each other to finish.
