Release 23.10.76 Notes

Test Release Date: October 6, 2023, **Production Release Date:** October 20, 2023

Agent Updates

None

Introduction

EPMware Release 23.10.76

This is a minor release containing new features and enhancements to existing features, and API additions. The features of this release were developed to enhance the design capabilities, performance, and improve ease of use of applications. System administrators and users will benefit from the enhancements across their application.

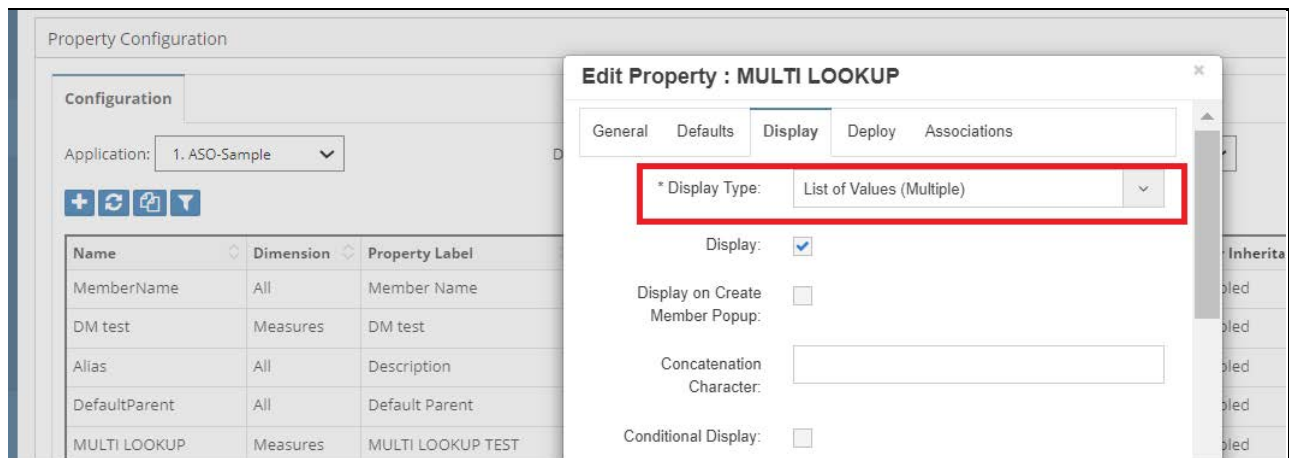

Change Types	# of items
New Features	2
Improvements	4
Fixes	4
Total	10

New Features

New Property Display Type “List of Values (Multiple)” which allows users to select multiple values from a list of values

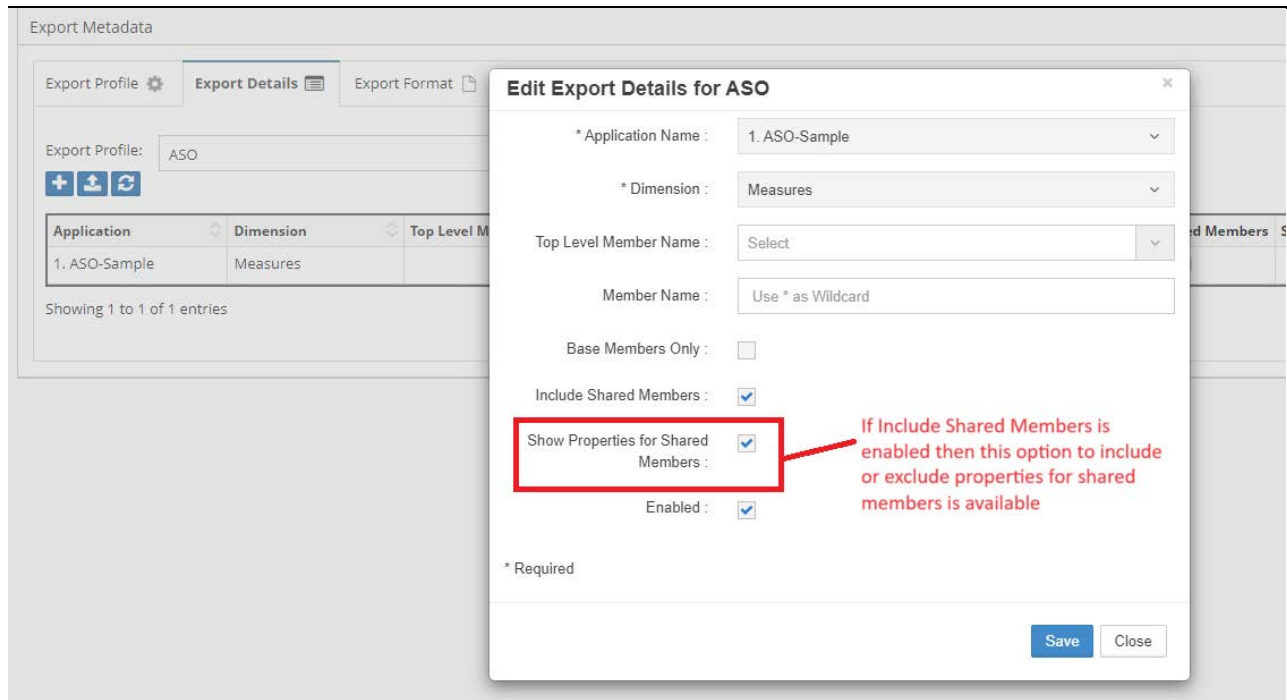

[EW-1818] - New Property Display Type to allow users to select Multiple values from a List.

In the Property Configuration screen, Display Tab a new option is now available to configure List of Values from which users can select multiple values rather than just a single value.

Add a new filter in the Export Details page to show member properties for Shared instances or exclude them

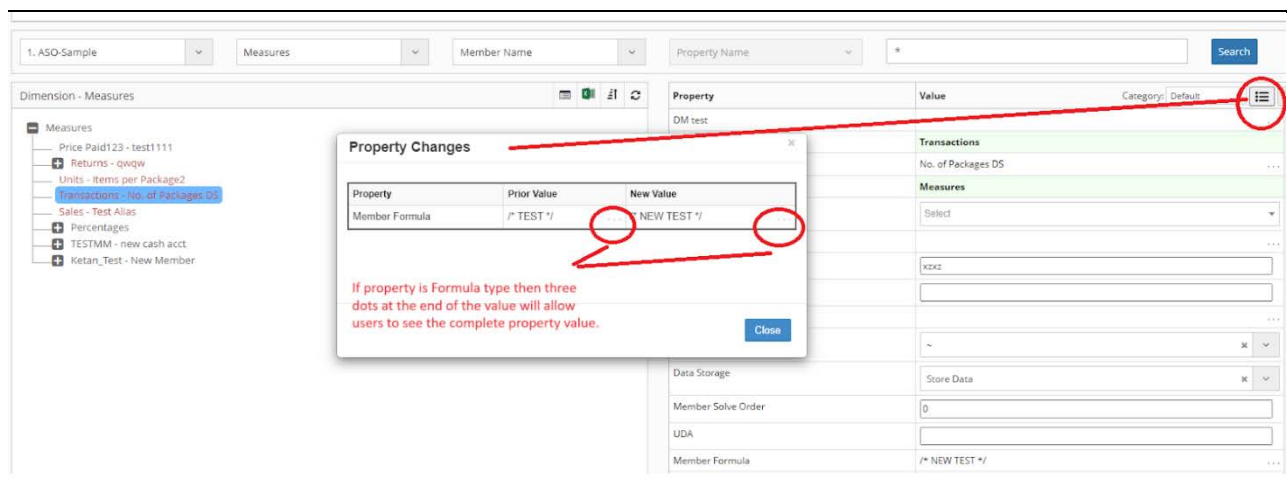

[EW-1729] - Add a new filter in the Export Details page to show member properties for Shared instances or Exclude them. This option is available only if “Include Shared Members” is enabled.

Improvements

Property Delta popup displays large formulas

[EW-1746] - Property Delta popup should show large formulas. Prior to this release, property delta popup showed only limited characters in the Prior Property values and New Property Values columns. With this release users can see complete formulas.

Improve Performance of Generating Emails for Very Large Requests (Lines > 200K)

[EW-1840] - Improve Performance of Generating Emails for Very Large Requests (Lines > 200K).

Remove Caching of Due Date field in the Request Header section

[EW-1848] - Remove Browser caching of Due Date field in the Request Header section. This will prevent some browsers from blocking the selection of a date.

Bulk Upload - Allow Large Formulas with Line Breaks to be uploaded

[EW-1855] - Bulk Upload - Allow Large Formulas with Line Breaks to be uploaded. Large Formulas having length > 2000 characters and containing line breaks will get processed after this release. Prior to this release, formulas with less than 2000 characters were allowed in the bulk upload files.

Fixes

Creating a new member as a Sibling under a Shared Parent throws an error

[EW-1836] - Creating a new member as a Sibling under a Shared Parent throws an error.

If a user creates a new member (Create member as Sibling) under a Shared Parent member then validation throws error for Invalid Parent Member.

“Request Approval Detail” report errors out if request ID list has the same request id multiple times

[EW-1845] - Request Approval Detail Report errors out if the request id list (parameter) has the same request id entered multiple times, for example, 101,102,102,103. In this case request id 102 is entered twice would throw an error for this report.

Users should not be allowed to delete or cancel request lines in the Approve stage

[EW-1854] - Users should not be allowed to delete or cancel request lines if the request is in the Approve stage.

Deployment REST API does not wait for Deployments to complete before returning Task Statuses

[EW-1856] - Deployment REST API does not wait for Deployments to complete before returning Task Statuses.
