Release 24.09.87 Notes

Release Dates

Sep 24th 2024 - TEST Environment

Oct 7th 2024 - PROD Environment

Agent Updates

None

Introduction

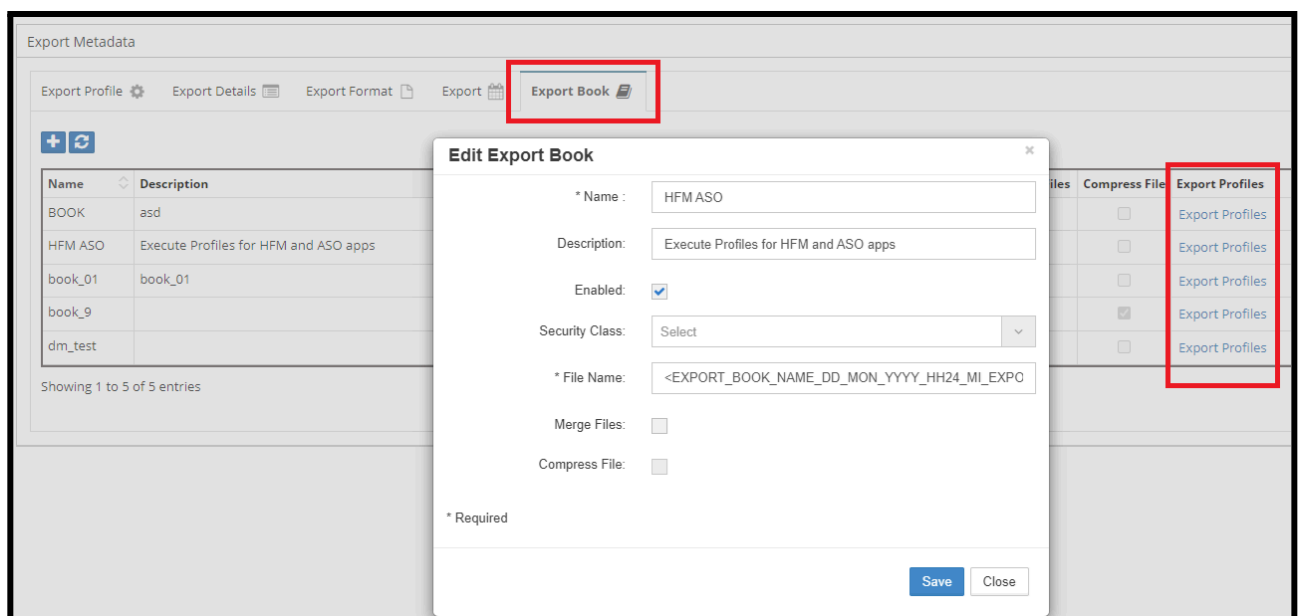

This EPMware Release is a minor release containing new features and enhancements to existing features, and API additions. The features of this release were developed to enhance the design capabilities, performance, and improve ease of use of applications. System administrators and users will benefit from the enhancements across their application.

Change Types	# of items
New Features	5
Improvements	8
Fixes	7
Total	20

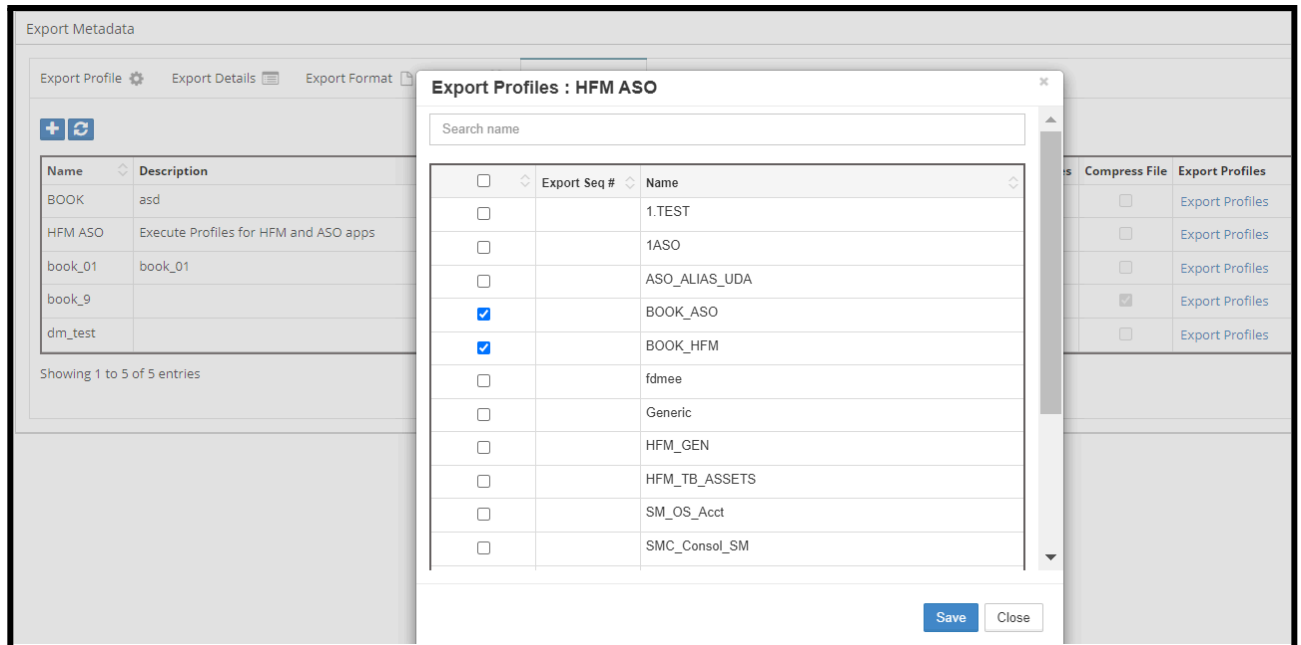

New Features

1. Create Export Book functionality to group multiple Export Profiles

[EW-2016] - Add feature in Export module to create and execute multiple profiles by creating Export Books. This will allow users to run multiple export profiles together executing a book.

Click on Export Profiles Link to add one or more Export Profiles in the Export Book.

2. Show Bulk Upload progress popup when request is closed and opened again

[EW-2047] - Show Bulk Upload progress popup when request is closed and opened again. When users are processing very large bulk upload files and the process takes several minutes to sometimes an hour, users may log off from the EPMWARE session and log back in the application to see their progress on the Bulk Upload with this new feature.

3. Add Support for HPCM Application Type

[EW-2095] - Added Support for HPCM Applications. HPCM is an On Premise Hyperion Profitability and Cost Management application. This is a new application type and deployment requires Agent Updates.

4. Build Connector for Microsoft Navision application

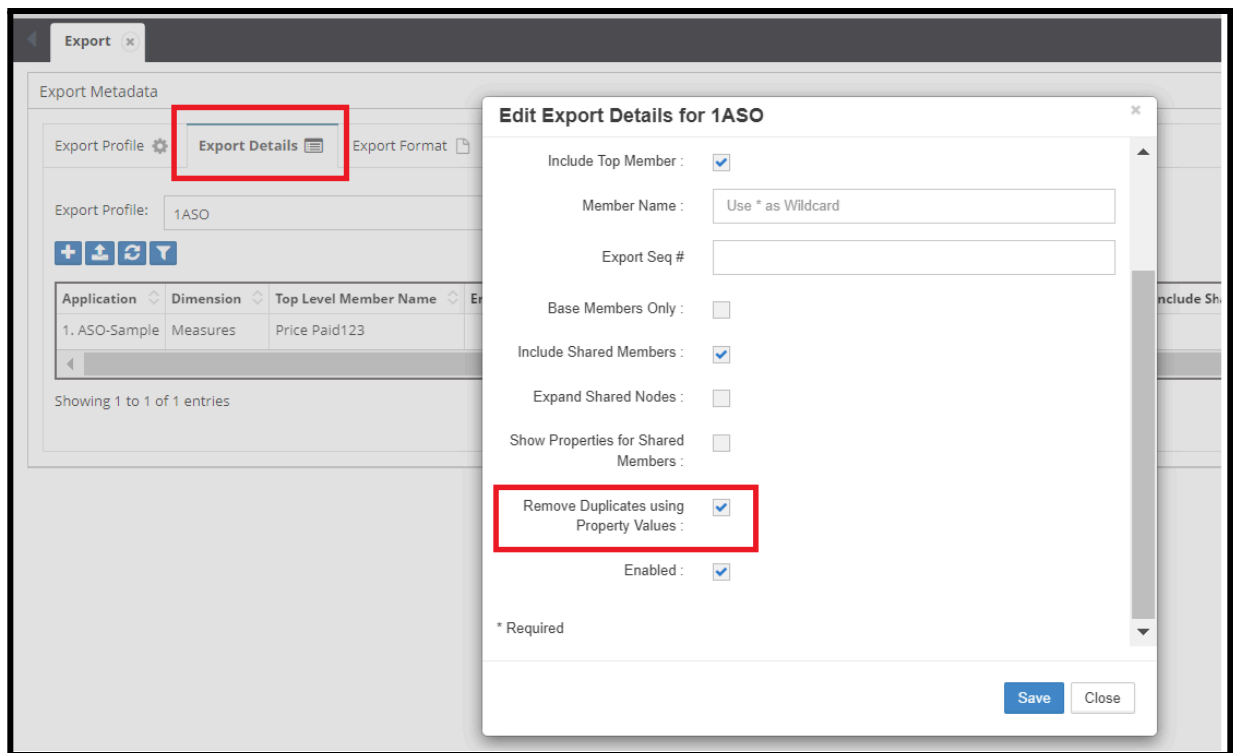

[EW-2078] - Built a connector for Microsoft Navision applications. This is a new application type and deployment requires Agent Updates.

5. In the export module provide a rule to remove duplicate nodes based on a set of properties values.

[EW-2089] - If users want to build an export where based on certain properties unique members are identified and exported in the file. In order to achieve this requirement the following setups are now provided.

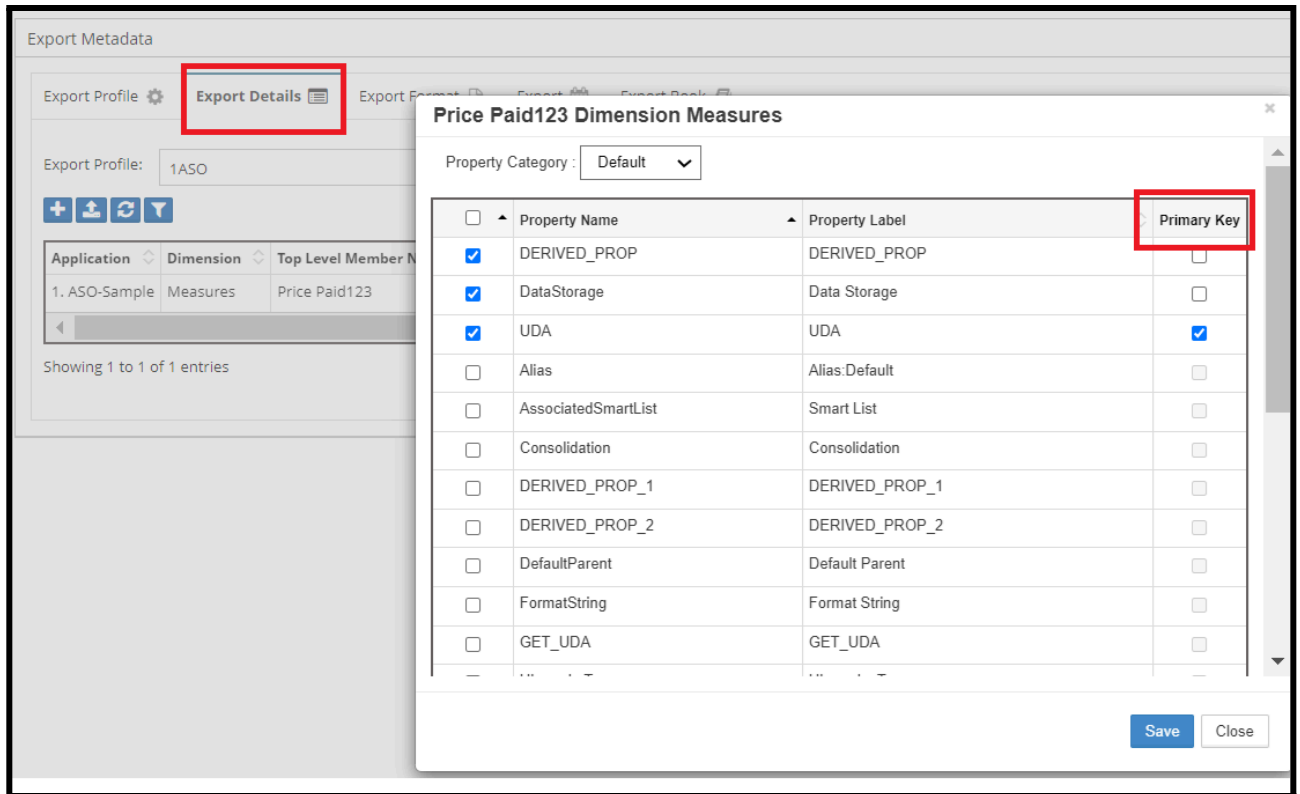

This feature requires 2 step configurations.

Step 1 : Enable Removal of Duplicate Members using Properties in the Export Details popup.

Step 2 : Assign Properties which will be used to determine Unique Nodes and any node which has the same property values will be excluded from the Export.

In the example shown below, all members which have unique UDA values will be selected for the Export. For example, if 2 members have the same UDA then only the first member will be selected.

Improvements

1. Property Configuration Screen - Dynamically change Property Labels for Minimum Value and Maximum Value to Lengths if the data type is a String.

[EW-2066] - Property Configuration Screen - Dynamically change Property Labels for Minimum Value/Maximum Value to Lengths if data type is String.

If the Property Data Type is an Integer or Float then labels will become Minimum/Maximum Value as shown below. If Property Data Type is String then labels will become Minimum/Maximum Length as shown below.

Add Property

* Display Sequence #: 1

Enabled: ☒

* Data Type: Integer

Required: ☐

Ancestor Inheritance: Not Enabled

Readonly: ☐

Security Class: Select

Minimum Value:

Maximum Value:

Backup Enabled: ☒

Save Cancel

2. Increase width of Properties popup under Export Details page.

[EW-2072] - Increase width of Properties popup under Export Details page. If property label and/or name are > 25 characters and if the export type is Generation then the “Include for Generations” checkbox was not visible completely and this issue is now fixed.

3. Allow Generic Application adapter to process custom agent parameters.

[EW-2084] - Allow Generic Application adapter to process custom agent parameters.

4. Create a New Report under the Configurations Report group to validate various SQLs assigned to Properties.

[EW-2110] - Create New Report under Configurations Report group to validate various SQLs assigned to Properties.

5. Add three new Export Book related reports .

[EW-2102] - Add three new Export Books related reports . (Configuration and Book Executions (Summary and Details)).

The screenshot displays the 'Submit / Monitor Reports' interface. At the top, there are tabs for 'Reports' and 'Recent'. The 'Reports' section contains a 'Report Group' dropdown set to 'Export', a 'Reports' dropdown with a list of options including 'Export Book Configuration Details' (which is highlighted), and a 'Report Format' dropdown set to 'CSV'. Below these, there is a 'Report Parameters' section with a 'Name (* as Wildcard)' field and an 'Application' dropdown set to 'Select'.

6. Show Missing Properties In the Export configuration Dimensions Report which are referred to by the Derived properties.

[EW-2084] - Show Missing Properties In the Export configuration Dimensions Report which are referred to by Derived properties.

This new column will help users determine other stored and derived properties which are not part of the export but they should be in order to calculate Derived property values.

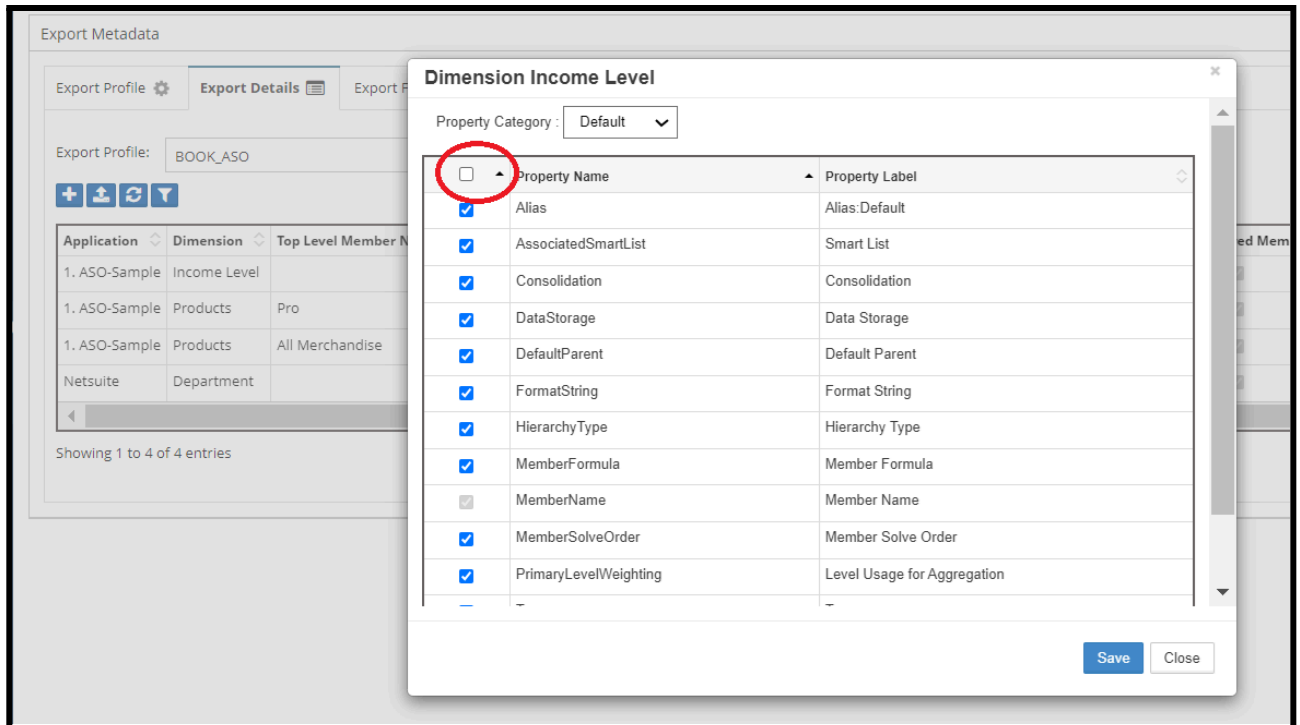

7. Add Parameter in the Export Execution Details Report for Creation Date Column.

[EW-2090] - Add Parameter in the Export Execution Details Report for Creation Date Column.

The screenshot displays the 'Submit / Monitor Reports' interface. It features a 'Reports' section with a 'Report Group' dropdown set to 'Export' and a 'Reports' dropdown set to 'Export Execution Details'. A 'Report Format' dropdown is set to 'CSV', and a 'Submit Report' button is present. Below this is the 'Report Parameters' section, which includes 'Export Profile Name' and 'Executed By' dropdowns. At the bottom, the 'Creation Date (From)' and 'Creation Date (To)' input fields are highlighted with a red box.

8. Allow sort by selected properties in the Export Details - Properties popup

[EW-2085] - Allow sort by selected properties in the Export Details - Properties popup.

Fixes

1. Deployment fails for Essbase apps in certain cases if deployment method is flipped from File to Direct

[EW-2079] - Deployment fails for Essbase apps in certain cases if deployment method is flipped from File to Direct.

2. Alias popup opens in different request tab when multiple new request tabs are opened

[EW-2082] - Alias popup opens in a different request tab when multiple new request tabs are opened.

3. Bulk upload for new members does not assign default values for Readonly properties having Default Values

[EW-2083] - Bulk upload for new members does not assign default values for Readonly properties having Default Values

4. Migration fails with ORA error if Export details have multiple Top Member Names

[EW-2087] - Migration fails with ORA error if Export details have multiple Top Member Names.

5. Recreating already deleted member in an open request throws ORA error - Unique key violation

[EW-2092] - Recreating an already deleted member in an open request throws an ORA error - Unique key violation. Review the following scenario where an issue arises which is fixed as part of this release.

Request 1 : Delete a member

Request 2: Re-create the same member (Allowed as per the Application property multiple requests on a locked member).

Delete Request 1. System is trying to restore a deleted member which already exists and hence we see an ORA error.

6. Moving a member in the Consolidated Dimension in OneStream throws Member already exists error if member belongs to the other dimension.

[EW-2109] - Moving a member in the Consolidated Dimension in OneStream throws an error "Member already exists" if member belongs to the other dimension.

7. ERP Import should be able to handle derived action codes

[EW-2094] - ERP Import should be able to handle derived action codes.
