Release 23.09.75 Notes

Test Release Date: September 11, 2023, **Production Release Date:** September 22, 2023

Agent Updates

None

Introduction

EPMware Release 23.09.75

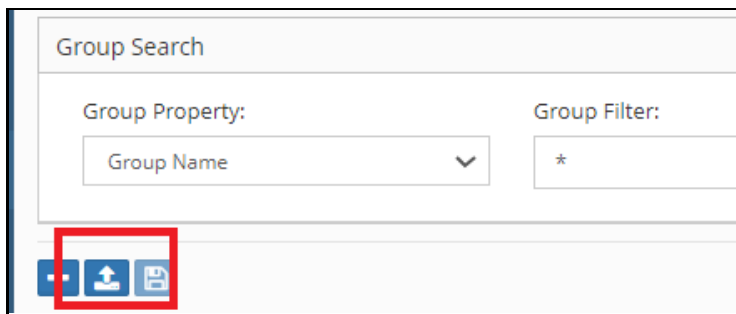

This is a minor release containing new features and enhancements to existing features, and API additions. The features of this release were developed to enhance the design capabilities, performance, and improve ease of use of applications. System administrators and users will benefit from the enhancements across their application.

Change Types	# of items
New Features	1
Improvements	11
Fixes	7
Total	19

New Features

Allow users to upload Security Groups using CSV file in the "Groups" screen

[EW-1642] - Allow users to upload Security Groups using CSV file in the "Groups" screen. Users can upload multiple Groups in EPMWARE using a CSV file.

Group Search

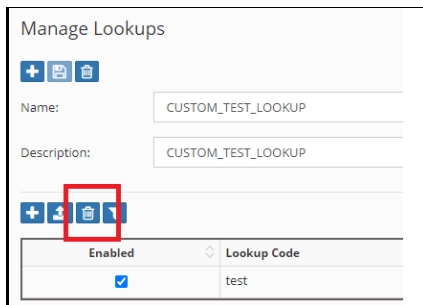

Group Property: Group Name

Group Filter: *

Improvements

Allow users to delete all lookup codes for custom lookups

[EW-1714] - Allow users to delete all lookup codes for custom lookups. This is useful if custom a lookup has a very large number of lookup codes and users would like to update lookup codes.

Manage Lookups

Name: CUSTOM_TEST_LOOKUP

Description: CUSTOM_TEST_LOOKUP

Enabled	Lookup Code
☒	test

Add two additional parameters in the Check Request Attachments API (Exclude Null attachments and check files with specific extensions)

[EW-1819] - Add two additional parameters in the Check Request Attachments API (Exclude Null attachments and check files with specific extensions).

Package : EW_REQ_API

```
-- Check if the Request has files attached or not
-- Optionally check to exclude Zero byte attachments as well as check
-- files having specific extensions (Seperated by comma char) for example
-- xls, xlsx and so on
FUNCTION chk_req_has_attachments(p_request_id NUMBER
                                ,p_exclude_null_atts IN VARCHAR2 DEFAULT 'N'
                                ,p_file_extensions IN VARCHAR2 DEFAULT NULL
                                )
RETURN VARCHAR2;
```

Improve performance of large Essbase Deployments

[EW-1822] - If Request has very large number of request lines for an Essbase application then deployments may be slow. This ticket will improve its performance.

Show Consolidated Log details in the Request Activity Log for Mass Approve action rather than for each line

[EW-1825] - Request Activity Log for Mass Approve action should show a single line note rather than for each line. This will help reduce lots of system generated information in the Request Activity Log by consolidating lines approved by mass approve action.

Add new Logic Builder API to check member's Active Flag (Generic apps only)

[EW-1826] - -- For Generic Apps Member has Active Flag property

Package : ew_hierarchy

```
FUNCTION get_member_active_flag (p_app_name IN VARCHAR2
                                ,p_dim_name IN VARCHAR2
                                ,p_member_name IN VARCHAR2)
```

```

)
RETURN VARCHAR2;

FUNCTION get_member_active_flag (p_member_id IN NUMBER)
RETURN VARCHAR2;
FUNCTION get_member_active_flag (p_app_dimension_id IN NUMBER
                                ,p_member_name IN VARCHAR2
                                )
RETURN VARCHAR2;

```

Support Multiple Email Tags in Email Templates for recipients fields

[EW-1831] - Multiple TAGs like <REQUESTOR> and <SEC_GROUP_ID> are now supported

Show Open Request Information in Compare Metadata Reports

[EW-1832] - Show Open Request Information in Compare Metadata Reports.

Add new parameter "Exclude" in the Compare Member Properties Report

[EW-1834] - Add new parameter "Exclude" in the Compare Member Properties Report. By default this parameter will have value 'Matched' and will exclude matched records so that users can focus on Unmatched properties only.

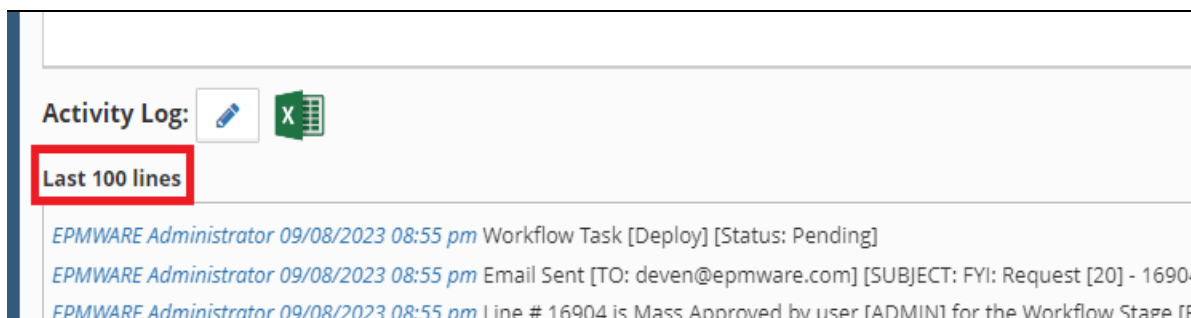

Performance improvement for Mass Approval action on Very Large Requests

[EW-1835] - Mass Approve action on a very large requests will take significantly less time to complete.

Show Only the Last 100 log lines on the Request Page Activities Log section.

[EW-1824] - Show Last 100 log details in Request Activities Log section. If the request has a very large activity log (For example request has > 100K Lines) then loading large details takes time and slows down loading of request lines details. By showing the last 100 lines only it will significantly improve performance of loading request line data. Users can download the full activity log in the request page as well as via a Report in the Audit Module.

Request Page (Bottom).

Generic application import Now Allow Large Text Properties in the CSV files

[EW-1827] - Generic application import now allows Large Text properties in the CSV files.

Fixes

Bulk Upload Validation - Properties flagged as Required are not captured if values are missing

[EW-1817] - Bulk Upload Validation - Properties flagged as Required and if values are not provided should throw errors

In the migration module Application Import is failing if the Dimension Class name and Application Name together are more than 40 characters

[EW-1819] - In migration module Application Import is failing if the Dimension Class name and Application Name together are more than 40 characters.

Creating new members and deploying it twice but under a different parent the second time does not deploy properly for Essbase and OneStream apps

[EW-1828] - Creating new members and deploying it twice but under a different parent member, the second time does not deploy properly for Essbase and OneStream apps.

Redeploying Essbase metadata where a parent member is deleted throws an error during deployment

[EW-1828] - Redeploying Essbase metadata where a parent member is deleted throws an error during deployment.

“Update Members Shared to Primary” report for OneStream app is failing

[EW-1829] - Update Members Shared to Primary report used for OneStream app is failing with ORA error.

Fix OneStream report that flips shared members to primary where a branch has both primary and shared instances of a member

[EW-1833] - OneStream report that flips shared members to primary where a branch has both primary and shared instances of a member need to process members from top to bottom and with this logic it has fixed the issue.

Dimension Mapping with Custom Logic Script throws error for the Move Member Action

[EW-1820] - Dimension Mapping with Custom Logic Script throws error for the Move Member Action
